MDM 201

SELLING THE SOLUTION

IQVIA / Reltio Cloud Master Data Management

FROM DATA TO CUSTOMER VALUE

Stakeholder messaging, master data capabilities, customer discovery, value propositions, client scenarios, and winning the business.

01 KNOW THE SOLUTION

02 BUILD TRUST

03 WIN BUSINESS

HISTORICAL LEARNING DESIGN SAMPLE • REPRODUCED FOR PORTFOLIO REVIEW

GUIDE OVERVIEW

The learning journey

An elevated reproduction of the original MDM 201 training architecture and selected detailed learning content.

01

Selling the Solutions

Understand the IQVIA Reltio Cloud MDM solution, stakeholder priorities, solution capabilities, and the value proposition.

02

Pathways to Success

Cultivate trust, investigate client challenges, apply discovery, and formulate an effective solution approach.

03

Winning the Business

Interpret RFP requirements, map solution capabilities, and understand proposal development and implementation methodology.

Source fidelity: This guide preserves historical product terminology and instructional framing. Product statements, competitive comparisons, and numerical claims are historical, not current product assurances.

MODULE 1 / SOLUTION FOUNDATIONS

What is the MDM opportunity?

Why clients consider IQVIA Reltio Cloud MDM, and how the solution aligns with business and technical needs.

PRE-BUILT DATA INTEGRATION

IQVIA data sources, including OneKey reference data, can be connected to Reltio for on-demand access and stewardship.

INTEROPERABILITY

The original offering describes interoperability with IQVIA Mobile Intelligence (CRM) and Commercial Data Warehouse (CDW).

REAL-TIME + BATCH

Integration capabilities include real-time APIs and batch approaches for different application environments.

CLOUD PLATFORM

Multi-tenant, multi-domain cloud architecture supports scalability, performance, and changing requirements.

THE CUSTOMER VALUE

Simplified access to trusted data, less manual reconciliation, stronger governance, and more effective information delivery across enterprise systems.

MODULE 1 / STAKEHOLDER INTELLIGENCE

Match the message to the buyer

Upstream stakeholders evaluate the same solution through different operational, technical, and business priorities.

IT EXECUTIVES

DECISION MAKER

Priority: Secure, affordable integration; less complexity; support for current and future applications.

Message: A platform partnership that shields IT complexity and supports secure integration and scaling.

Result: Faster time-to-value and return on investment.

DATA STEWARDS

DECISION MAKER / INFLUENCER

Priority: An integrated platform for high-quality data and flexible stewardship.

Message: Tools for prioritizing, governing, and managing data, including OneKey HCP/HCO reference data.

Result: More effective processes and faster time-to-value.

IT ANALYSTS

INFLUENCER

Priority: Tools for access, data management, and application provisioning.

Message: An information delivery platform with intuitive tools, on-demand access, and connectors.

Result: Easier access, mastering, provisioning, and integration.

MODULE 1 / DOWNSTREAM STAKEHOLDERS

Translate value by business function

Downstream users consume mastered data and benefit from reliable information across operational processes.

SALES

Client loyalty, consistent segmentation, orchestrated customer engagement, and better in-field insights.

COMPLIANCE

Reporting accuracy, transparency, control of global data, and appropriate usage.

FINANCE & COMMERCIAL

Cross-functional savings, lifecycle ownership, reduced cleansing costs, and agreement visibility.

IT PRODUCT CONSUMERS

Reduced delivery costs, better analytics harmonization, and application flexibility.

SUPPLY CHAIN

Vendor visibility, consistent engagements, operations planning, and fewer out-of-stock events.

PROCUREMENT

Price-level management, stakeholder and transaction visibility, and procurement cost efficiency.

MARKETING

Aligned information, consistent messaging, and improved portfolio management.

RESEARCH & DEVELOPMENT

Asset management, trial efficiencies, and understanding of market drivers.

MODULE 1 / SALES PROCESS

Identify. Match. Articulate.

The original curriculum moves from understanding the buying group to matching capabilities and expressing value.

01

IDENTIFY THE BUYER GROUP

Who holds the budget? Who influences? Who blocks? Who decides what is a priority?

02

DISCOVER REAL BUSINESS NEEDS

Locate opportunities, adoption-ready channels, perceived priorities, and underlying priorities.

03

MATCH CAPABILITIES

Connect prebuilt integration, governance, scalability, and cloud architecture to the client's stated requirements.

04

ARTICULATE VALUE

Translate product features into benefits, business outcomes, and an evidence-based proposition.

MODULE 1 / PRODUCT OFFERINGS

Capabilities to customer outcomes

Historical IQVIA-configured Reltio MDM and OneKey Data-as-a-Service offerings.

IQVIA-CONFIGURED RELTIO MDM

FEATURES

Flexible IQVIA data model; OneKey, CRM, and CDW interoperability; AWS-based cloud infrastructure; auditable processes.

BENEFITS

Simpler configuration, better governance, and trusted insights.

BUSINESS NEEDS SOLVED

Rapid scaling, less time spent maintaining master data, and connected legacy/new data.

ONEKEY REFERENCE DATA AS A SERVICE

FEATURES

Reference data provisioned into Reltio; interactive search; real-time APIs; Salesforce connectors; batch import/export.

BENEFITS

On-demand trusted reference data and agile integration.

BUSINESS NEEDS SOLVED

Improved commercial effectiveness, lower stewardship burden, and connected applications.

MODULE 1 / VALUE PROPOSITION

Communicate the value clearly

The original course provides 25-, 50-, and 100-word formats for adapting the IQVIA / Reltio MDM proposition.

25-WORD FORMAT

The IQVIA / Reltio Cloud MDM offering is a multi-domain MDM solution pre-integrated with a connected landscape of IQVIA data assets and applications enabling faster and smarter actionable insights.

50-WORD FORMAT

The IQVIA / Reltio Cloud MDM offering is a multi-domain Master Data Management solution pre-integrated with a connected landscape of IQVIA data assets, applications, and stewardship. This rapidly deployed offering enables faster and smarter actionable insights to improve commercial performance and engagement.

100-WORD FORMAT

The IQVIA / Reltio Cloud MDM offering is a multi-domain Master Data Management solution pre-integrated with a connected landscape of IQVIA data assets, applications, and stewardship. This rapidly deployed offering enables faster and smarter actionable insights to improve commercial performance and engagement. Business users get a new breed of software and data that is highly intuitive and provides insights and recommendations directly relevant to your tasks at hand. IT gets a next generation Platform as a Service (PaaS) capability to more efficiently and cost effectively manage data.

MODULE 2 / PATHWAYS TO SUCCESS

From trust to opportunity

Self-guided reflection prepares sales professionals to navigate customer concerns, discovery gaps, and complex decisions.

TRUST-BASED IMPEDIMENTS

- Client is reluctant to share competitor, sensitive, or protected information.
- Client requests additional decision-makers.
- Client asks for proof of differentiation.

CLIENT-KNOWLEDGE IMPEDIMENTS

- Not enough background information to qualify a lead.
- Customer challenges and change strategies are unclear.
- The proposition does not resonate with perceived needs.

CLOSING IMPEDIMENTS

- Implementation cost appears difficult to justify.
- Negotiation continues after initial interest.
- Competitive and technical questions remain unresolved.

MODULE 2 / GUIDED REFLECTION

Solutions Think Tank

Retaining the original reflective practice: formulate responses before reviewing suggested approaches.

01 BUILD TRUST

How would you respond if a client declined to share sensitive information or wanted to involve more decision-makers?

02 KNOW THE CLIENT

How would you uncover the business problem when the client's needs and priorities are unclear?

03 MOVE THE SALE FORWARD

How would you handle implementation cost objections or unresolved competitive questions?

MODULE 2 / PRACTICAL APPROACHES

Address the client challenge

The source emphasizes investigation, active listening, precise solution alignment, and responsive follow-through.

- Investigate the client situation using internal and external resources.
- Ask relevant background questions; do the homework and seek clarification.
- Use active listening to understand the client's perspective.
- Ask about challenges, expectations, and the business consequences of inaction.
- Articulate why the offering fits the customer's requirements and outcomes.
- Answer objections; if uncertain, commit to researching and following up.
- Know which IQVIA resources and experts can support difficult questions.
- Align customer expectations with project-team delivery capabilities.
- Track results and identify appropriate opportunities for account growth.

MODULE 2 / APPLIED CASE STUDY

The client situation

A historical pharmaceutical customer scenario translates discovery into an MDM solution recommendation.

BUSINESS CONTEXT

A top-10 pharmaceutical company uses IQVIA data across more than 25 markets, but point-to-point connectors and decentralized management limit harmonization.

DISCOVERY PRIORITIES

An upcoming product launch requires broad integration, consistent hierarchies and identifiers, management of non-IQVIA data, and centralized promotional messaging.

TECHNICAL REQUIREMENTS

SaaS hosting; EU data-location requirements; phased multi-country, multi-domain deployment; scalability; and user-friendly data stewardship.

KEY DECISION DRIVERS

Scalability, provider flexibility, and maximization of total cost of ownership (TCO).

MODULE 2 / CASE RESOLUTION

Solution and phased outcome

Historical scenario: a multi-domain Reltio tenant hosted in Europe, with integrated data sources and staged market deployment.

SOLUTION DESIGN

Single MDM solution; CRM and ERP integration; graph-based HCO relationships; promotional key messages; OneKey reference data; and one provider for licensing, delivery, and support.

PHASE I

The source describes 17 markets in two clusters, with a base solution configuration planned in three months.

PHASE II

An additional eight markets and advanced functionalities were planned for the following phase.

DIFFERENTIATION

Industry data expertise, out-of-the-box HCP/HCO models, global compliance knowledge, and one point of accountability.

MODULE 3 / WINNING THE BUSINESS

Read the RFP strategically

The source scenario concerns North American Bioscience customer master data, with scalability across additional divisions.

SCOPE

The customer operates Bioscience, Diagnostic, and Hospital divisions. The immediate RFP covers North American Bioscience customer MDM, with future extension to additional divisions, vendors, and materials.

BUSINESS GOALS

Improve data quality, deliver high-trust operational and analytical data, harmonize sources, reduce reconciliation effort, and establish a golden record.

CURRENT ENVIRONMENT

Customer data is distributed across SAP, Salesforce, a customer data warehouse, and Revitas, without a single complete master record or connected systems.

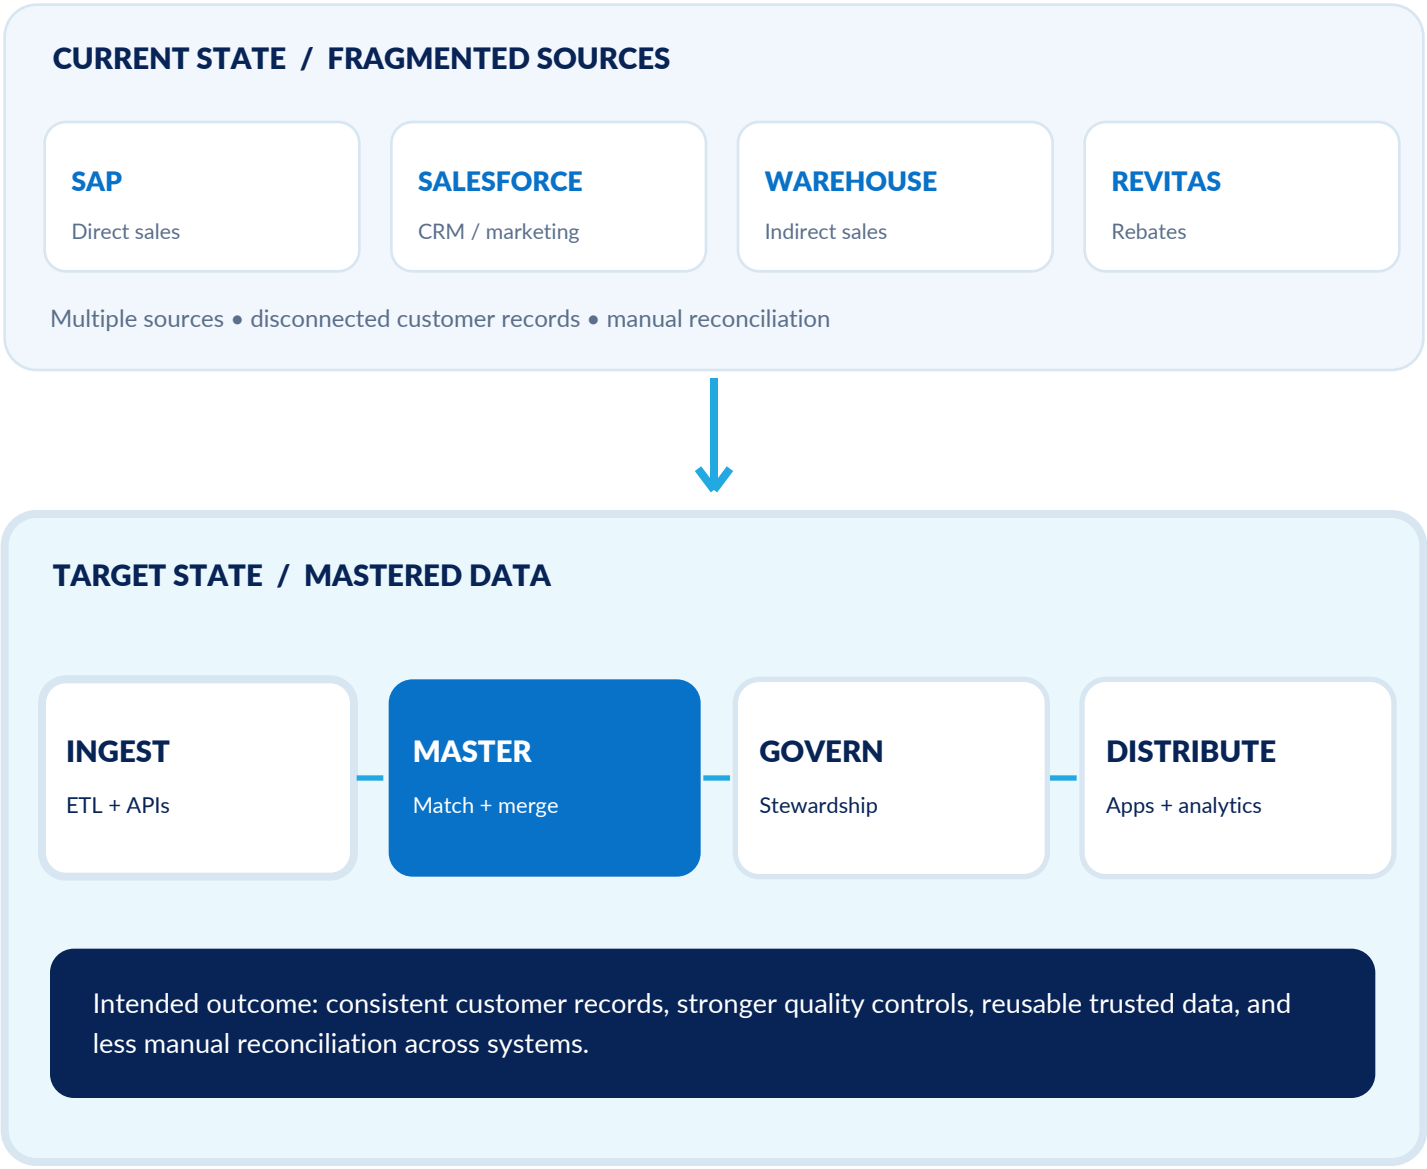

SCALE

The source cites approximately 300,000 organizations, more than 1.3 million individuals, and more than 500 users.

MODULE 3 / ARCHITECTURE

A unified customer golden record

Conceptual redraw of the source system landscape and target-state data flow; not a technical implementation specification.

MODULE 3 / REQUIREMENTS

What the technology must support

A condensed presentation of the 19 technical capabilities enumerated in the original client RFP.

01 Centralized creation and modification of master data

02 Automated workflows, alerts, reminders, and reporting

03 Golden record across sources

04 Distribution of golden records to relevant systems

05 Configurable user input screens

06 Scheduled data releases and integrations

07 Master data change tracking

08 Rule-based mass changes

09 Auto-populated fields

10 Configurable approval exclusions

11 NA-first scope with later geographic expansion

12 New object types and divisions

13 Additional fields not in source systems

14 Quality rules for new or updated data

15 Validation against defined quality criteria

16 Data quality scorecards and reports

17 Rule-based automatic correction

18 Match and merge duplicate records

19 Reuse and migration of external and legacy master data

MODULE 3 / PROPOSAL DISCIPLINE

Build a winning response

The source's RFP/RFI guidelines emphasize ownership, strategic alignment, disciplined schedules, and quality assurance.

ONE ACCOUNTABLE SALES LEAD

Assign one lead to coordinate final decisions on strategy, products, pricing, and the response.

STRATEGY BEFORE KICKOFF

Agree on the sales approach and proposed offerings before launching the RFP response process.

ESTABLISH A FREEZE DATE

Reserve time for quality assurance, consistent voice, proofreading, editing, and formatting.

PROACTIVE DELIVERY

Meet deadlines, raise risks, seek help, and escalate rather than creating last-minute emergencies.

CLEAR COMMUNICATION

Use meaningful email subjects, identify the RFP, and clearly indicate urgent requests.

MODULE 3 / SOLUTION ALIGNMENT

Current state to envisioned state

Translate client pain points into key success factors and corresponding solution capabilities.

CUSTOMER DATA EXECUTION

Integrate sources, gain country-owner adoption, and strengthen governance through prebuilt integration accelerators and data governance expertise.

IMPLEMENTATION EXCELLENCE

Use implementation accelerators, local/global specialists, change management, and integrated professional services.

TIME TO VALUE

Demonstrate impact quickly with a low-cost, high-impact foundation and delivery support.

DATA SYNERGY

Apply quality standards, integrated services, and stewardship best practices to existing investments.

STRATEGIC ENABLEMENT

Support future countries, data sources, golden-record consumption, and expanded compliance use cases.

MODULE 3 / SOLUTION DESIGN

From source data to mastered data

Historical solution approach: ingest, match, merge, apply survivorship, govern, and publish to the customer ecosystem.

01 INGEST

ETL and batch processes bring source information into the Reltio tenant.

02 MATCH & MERGE

Matching rules, configuration, and survivorship build a 360-degree customer record.

03 STEWARD

Data stewards access the Reltio user interface to manage master data quality.

04 PUBLISH

Mastered data is exported and distributed to relevant customer systems.

05 ACCELERATE

Prebuilt IQVIA accelerators are intended to improve speed, efficiency, and deployment quality.

MODULE 3 / IMPLEMENTATION

Five-phase delivery methodology

The original adaptive implementation methodology connects business discovery to support and ongoing improvement.

01

DISCOVERY

UNDERSTAND NEEDS

Gap analysis; proposal; project creation; resource planning.

02

PLAN

LAY FOUNDATION

Requirements; solution design; risk management; test planning.

03

BUILD

DEVELOP SOLUTION

Configuration; customization; testing; iterative review.

04

DEPLOY

MOVE TO PRODUCTION

Integration testing; UAT; client training; release management.

05

SUPPORT

HANDOVER + HYPERCARE

Tiered support; SLAs; fixes; service reviews.

PORTFOLIO / HISTORICAL CONTEXT

About this learning sample

A standalone, redesigned reproduction of historical enterprise sales enablement training.

INSTRUCTIONAL DESIGN HIGHLIGHTS

- Multi-stakeholder solution messaging and buyer-group identification.
- Feature-to-benefit-to-business-outcome articulation.
- Scenario-based discovery and reflective practice.
- Client RFP analysis, requirements alignment, and proposal discipline.
- Implementation lifecycle and cross-functional delivery considerations.

SOURCE AND ATTRIBUTION

Reproduced from the historical eight-page training resource Master Data Management (MDM) 201: Selling the Solutions. Original company and product references are retained to represent the work as created. This redesign is a portfolio sample, not current IQVIA or Reltio product documentation, an endorsement, or an official publication.

REFERENCE APPENDIX

The original eight pages follow to preserve the complete source wording, diagrams, RFP details, historical numerical claims, and instructional artifacts for direct comparison.

Master Data Management (MDM) 201: Selling the Solutions

Module 1: IQVIA Reltio Cloud MDM (Know your stuff!)

Learning How to Communicate MDM Features, Benefits, Value Proposition, and Offerings in Detail with your Clients

Theme: Remembering the "Who" and the "Why?" of Master Data Management solutions.
- **Who** are our Customer Stakeholders?
- **Why** should our Customer Stakeholders consider Reltio MDM as a Master Data Management solution?

- Why do our Clients need the IQVIA Reltio Cloud MDM Solution?
  - IQVIA Matches Reltio MDM Capabilities with Our Clients' Needs
    - Reltio MDM Features and Benefits

Reltio MDM Features
- Pre-built integration between Reltio and IQVIA data sources such as OneKey
  - OneKey Reference Data as a Service enables on-demand data access and stewardship
- Interoperability with IQVIA offerings such as Mobile Intelligence (CRM) and Commercial Data Warehouse (CDW)
- Robust integration capabilities including real-time APIs and batch

Reltio MDM Benefits
- Intuitive tools and technology that supports on-demand access to data and the tools for managing data, as well as connectors that integrate and provision application
- Innovation: Multi-tenant, Multi-domain, Cloud-based Big Data Architecture, High Performance, Scalability
- Acceleration: Configuration capabilities, Advanced User Interface, Robust Roadmap, API as first approach
- Healthcare Ecosystem Expansion: System Integration partnerships, and Technology partnerships
- Simplification: Provides a simplified access (within a robust system) to IQVIA data within the Reltio Cloud

- Step 1 in Selling the Solutions: Understanding How to Think of MDM as a Multi-Stakeholder Sell
  - Customize MDM Sales messaging according to Stakeholder Type
    - Upstream Customer Stakeholders
      - IT Executives
      - Data Stewards

Reltio MDM IT Executives and Data Steward Benefits
- Improved data-sharing across multiple systems
- Less manual effort to reconcile data
- Error reduction
- Reduction in technical interface proliferation
  - Cost reduction
  - Less maintenance
  - Technology version control

- Quick Reference Cards (QRCs) for addressing Decision Makers and Influencers (to include IT Analysts as Influencers):

Decision Maker Quick Reference Card
IT Executives
- IT Executives are looking for a single vendor to provide secure and affordable solutions to address challenges in system complexity, as well as integration for new initiatives and/or previously purchased solutions
- IQVIA Reltio Cloud MDM is a Platform Partnership that shields IT complexity, while providing a secure means to integrate current and future applications.
- Unlike our competitors (Veeva Network and Informatica MDM) our MDM solution is built on a partnership between IQVIA and Reltio that expedites the ability to rapidly scale and respond to evolving market needs and provide superior customer experience.
- Results: Faster Time-to-Value (TTV) and Return on Investment (ROI) for your organization

Decision Maker/Influencer Quick Reference Card
Data Stewards
- Data Stewards are looking for an integrated platform that enables an effective and flexible approach to providing high-quality data
- IQVIA Reltio Cloud MDM is a Master Data Management solution that provides robust tools to segment, prioritize, and oversee data. It also supports custom lifecycle actions for integration with external systems when external data augmentation is needed.
- Unlike our competitors (Veeva Network and Informatica MDM) our MDM solution offers pre-built integration between Reltio and key IQVIA data sources such as OneKey. It also supports on-demand access to Healthcare Professional (HCP) and Healthcare Organization (HCO) data to expedite access to key business information.
- Results: Business processes become more effective, optimally operationalized, and supportive of a faster TTV and ROI.

Influencer Quick Reference Card
IT Analysts
- IT Analysts are looking for integrated solutions that provide tools to manage data access, data management, and application provisioning
- IQVIA Reltio Cloud MDM is an Information Delivery Platform that offers easy-to-understand, intuitive tools and technology that supports on-demand access to data, tools for managing and mastering data, and connectors that integrate and provision applications.
- Unlike our competitors (Veeva Network and Informatica MDM) our MDM solution provides powerful and comprehensive end-to-end (E2E) solutions across dynamic access, unified data management, and application integration.
- Results: Ease of access to data, data management, provisioning, and dynamic application integration capabilities.

    - Downstream Customer Stakeholders
      - Users who benefit from the Reltio MDM solution
        - Downstream Stakeholders may provide data input, but cannot manipulate system components
        - Reltio MDM Benefits according to Downstream Stakeholder type:

Reltio MDM Sales Benefits
- Drives client loyalty and deepens insights
- Allows for consistent segmentation
- Supports Orchestrated Customer Engagement
- Better equips the client's in-field team
- Promotes faster integration of new channel data

Reltio MDM Compliance Benefits
- Enables IDMP product reporting
- Creates reporting transparency and accuracy
- Helps control spending
- Centralizes control and distribution of global data
- Mitigates liability, while ensuring appropriate usage

Reltio MDM Finance & Commercial Benefits
- Holistically manages A/R, AP, and Commercial agreements
- Achieves cross-functional cost savings, and delivers strong ROI
- Reduces outsource cleansing and clean-up costs
- Delivers lifecycle management and ownership of data
- Assists with managing mergers and acquisitions

Reltio MDM IT Product Consumer Benefits
- Reduces costs: information delivery and client interface
- Reduces 3rd Party data acquisition costs
- Enriches analytical solutions, while improving analysis harmonization
- Contributes to IT as a valued business partner
- Promotes gains in application flexibility and lifecycle

Reltio MDM Supply Chain Benefits
- Provides understanding and management of key vendor information
- Delivers consistent engagements with clear view of MDM
- Improves sales management and operations planning
- Supports contract management
- Predicts/Prevents out-of-stock events

Reltio MDM Procurement Benefits
- Manages different price levels across countries and portfolios
- Holistically understands material purchase variations
- Identifies stakeholders linked to proposals, offers, and transactions
- Provides procurement cost efficiency
- Manages mergers and acquisitions effectively

Reltio MDM Marketing Benefits
- Aligns information with all functions
- Understands shopper and consumer activities
- Helps achieve Orchestrated Customer Engagement
- Delivers consistent messaging
- Increases portfolio management accuracy

Reltio MDM Research and Development Benefits
- Supplies enhanced system for asset management
- Improves efficiencies in trial management
- Provides better understanding of market drivers and opportunities
- Secures consistent Proj. Mgmt. throughout Product Lifecycle
- Aligns multiple levels of info with all relative functions

- Step 2: Identify and Match
  - Identify the Buyer Group among Multiple Stakeholders
    - Who are the budget holders?
    - Who are the influencers?
    - Who are the blockers?
    - Who decides what is and is not a priority?
  - Identify the Clients' Business Needs
    - Where are the opportunities?
    - Which business channels are most open to the adoption of a Reltio MDM solution?
    - What are the Perceived Priorities?
    - What are the Real Priorities?
  - Match Reltio MDM Capabilities with Our Clients' Needs
    - (*Reference / Link to Upstream and Downstream Customer Benefits*)
    - When matching capabilities to client needs, learn how to quickly summarize Reltio MDM Features and Benefits:

Reltio MDM Features
- Pre-built integration between Reltio and IQVIA data sources such as OneKey
  - OneKey Reference Data as a Service enables on-demand data access and stewardship
- Interoperability with IQVIA offerings such as Mobile Intelligence (CRM) and Commercial Data Warehouse (CDW)
- Robust integration capabilities including real-time APIs and batch

Reltio MDM Benefits
- Intuitive tools and technology that supports on-demand access to data and the tools for managing data, as well as connectors that integrate and provision application
- Innovation: Multi-tenant, Multi-domain, Cloud-based Big Data Architecture, High Performance, Scalability
- Acceleration: Configuration capabilities, Advanced User Interface, Robust Roadmap, API as first approach
- Healthcare Ecosystem Expansion: System Integration partnerships, and Technology partnerships
- Simplification: Provides a simplified access (within a robust system) to IQVIA data within the Reltio Cloud

    - Be able to Summarize IQVIA-Configured Reltio Cloud MDM Offerings in Detail

IQVIA-Configured Reltio Cloud MDM Features
- Preconfigured, flexible data model that supports IQVIA data solutions
- Interoperability with key IQVIA offerings such as OneKey, Mobile Intelligence (MI / CRM), and Commercial Data Warehouse (CDW)
- Scalable, cloud-based infrastructure build using Amazon Web Services (AWS)
- Rich process management with full audit capability

IQVIA-Configured Reltio Cloud MDM Benefits
- Simplified configuration with reduced time-to-market
- Improved data quality and governance with seamless integration of IQVIA data sources
- Derives best actionable insights from trustworthy and credible data points across commercial activities
- Connect new and legacy data sets into a single platform that scales at a speed needed to support evolving business objectives

IQVIA-Configured Reltio Cloud MDM Business Needs Solved
- Ability to rapidly scale and respond to evolving market needs
- Prioritize time on core business by offloading the critical need for complete, accurate, and reliable Master Data to a trusted industry leader

    - Get a Handle on the Up-Sell: Describe the Basic Advantages of Integrating Reltio Cloud MDM and OneKey Reference Data as a Service (DaaS)

OneKey Reference Data as a Service Features
- Seamless Data-as-a-Service (DaaS) flows and stewardship provided by publishing IQVIA reference data in the Reltio Cloud MDM solution (Note: OneKey is the source that provisions IQVIA Reference Data into Reltio MDM.)
- Ability to deliver data on-demand with interactive search-and-consume capability along with pre-defined parameters and dynamic match capability
- Robust real-time API supporting all core product functionality
- SFDC connectors provided
- Generic import/export capability that allows batch integration (via flat files, if necessary)

OneKey Reference Data as a Service Benefits
- Improved data quality and governance with seamless integration of IQVIA data sources
- Superior client experience enabled by the agility of delivering data in the cloud
- Ability to rapidly scale and respond to evolving market needs
- Rapid integration with cloud-based software, including SFDC and other API-centric platforms
- Ability to integrate with legacy applications that require flat file based architecture

OneKey Reference Data as a Service Business Needs Solved
- Optimized commercial effectiveness with immediate access to IQVIA data solutions
- Reduced burden on data stewardship and other support functions
- Ability to integrate with the full landscape of business applications and data required for commercial excellence and compliance

- Step 3: Know the IQVIA Reltio MDM Value Proposition, and learn to express it clearly and effectively at length and in summary
  - Value Proposition Statement [25-Word Format]

IQVIA + Reltio Cloud MDM Value Proposition
The IQVIA / Reltio Cloud MDM offering is a multi-domain MDM solution pre-integrated with a connected landscape of IQVIA data assets and applications enabling faster and smarter actionable insights.

  - Value Proposition Statement [50-Word Format]

IQVIA + Reltio Cloud MDM Value Proposition
The IQVIA / Reltio Cloud MDM offering is a multi-domain Master Data Management solution pre-integrated with a connected landscape of IQVIA data assets, applications, and stewardship. This rapidly deployed offering enables faster and smarter actionable insights to improve commercial performance and engagement.

  - Value Proposition Statement [100-Word Format]

IQVIA + Reltio Cloud MDM Value Proposition
The IQVIA / Reltio Cloud MDM offering is a multi-domain Master Data Management solution pre-integrated with a connected landscape of IQVIA data assets, applications, and stewardship. This rapidly deployed offering enables faster and smarter actionable insights to improve commercial performance and engagement. Business users get a new breed of software and data that is highly intuitive and provides insights and recommendations directly relevant to your tasks at hand. IT gets a next generation Platform as a Service (PaaS) capability to more efficiently and cost effectively manage data.

(Continued on next page)

Module 2: Pathways to Success

Actionable Insights: Preparations and approaches for selling the IQVIA Reltio Cloud MDM solution

Theme: Self-guided learning that offers guidance for understanding:

- **Pre-sales considerations:** overcoming challenges, blocking issues, objections
- **What are the requirements?** real-world insights supported by MDM expectations as expressed by our clients
- **Pathway to success:** knowing how to answer the needs of the client (ex. current scenarios and success factors, the IQVIA value proposition, our solution approach, case studies, etc.

- The IQVIA Reltio Cloud MDM Solution meets: *The Client Challenge*
  - Cultivating your client's trust

Trust-Based Impediments
- My client doesn't want to share information
  - Information related to engagement with competitors
  - Sensitive data
  - Protected data
- My client wants to involve more decision-makers in the conversations
- My client doesn't yet value our IQVIA offerings over that of our competitors
  - "Show me proof that you're the better option"

WHAT WOULD YOU DO?
Trust-Based Impediments
- My client doesn't want to share information
  - Information related to engagement with competitors
  - Sensitive data
  - Protected data
- My client wants to involve more decision-makers in the conversations
- My client doesn't yet value our IQVIA offerings over that of our competitors
  - "Show me proof that you're the better option"

Solutions Think Tank

There's no one singular answer to these blocking issues.

Using your laptop, or pen and paper, write down some solutions you might consider when faced with these circumstances.

Keep your ideas handy. We'll cover possible solutions at the end of this section.

  - Understanding your client's business, their strategies, and how they go about their account planning

Client Knowledge Impediments
- I can't seem to find enough background information on this client to turn this into a lead
- I know my client faces business challenges, but I'd like to know about them up front
- How do I make this client think about change strategies?
- I want to show the IQVIA value proposition to this client, but I feel like I'm missing some facts
- The solutions I'm describing to my client is not resonating with their perceived needs

WHAT WOULD YOU DO?
Client Knowledge Impediments
- I can't seem to find enough background information on this client to turn this into a lead
- I know my client faces business challenges, but I'd like to know about them up front
- How do I make this client think about change strategies?
- I want to show the IQVIA value proposition to this client, but I feel like I'm missing some facts
- The solutions I'm describing to my client is not resonating with their perceived needs

Solutions Think Tank

There's no one singular answer to these blocking issues.

Using your laptop, or pen and paper, write down some solutions you might consider when faced with these circumstances.

Keep your ideas handy. We'll cover possible solutions at the end of this section.

  - Closing a complex sales lead

Closing Sales Lead Impediments
- My client doesn't see the value in the cost of implementation
- My client has come back to me in the early stage and mid-stages, but there's still a lot of negotiation left to do
- I need my client to understand that critical, decision-enhancing information will come once we've reached an agreement on the scope of the sell
- I feel like I'm not managing the tough questions well enough (questions regarding our competition, differentiators, advantages, etc.)

WHAT WOULD YOU DO?
Closing Sales Lead Impediments
- My client doesn't see the value in the cost of implementation
- My client has come back to me in the early stage and mid-stages, but there's still a lot of negotiation left to do
- I need my client to understand that critical, decision-enhancing information will come once we've reached an agreement on the scope of the sell
- I feel like I'm not managing the tough questions well enough (questions regarding our competition, differentiators, advantages, etc.)

Solutions Think Tank

There's no one singular answer to these blocking issues.

Using your laptop, or pen and paper, write down some solutions you might consider when faced with these circumstances.

Keep your ideas handy. We'll cover possible solutions at the end of this section.

  - Proven solutions for addressing client challenges
    - Did any of these potential solutions show up in your own **Solutions Think Tank**?

This course will guide you on your journey to finding the answers, overcoming obstacles, and achieving your targets.

- Investigate your client's situation (seeking help from GKAMs and RKAMS, as necessary) so that you may properly prepare yourself for interacting with your client
- Ask relevant questions regarding client background (do the homework, and don't be afraid to ask questions)
- Use active listening practices with engaging with your client in the interest of understanding the client's perspective – this will guide you in your next steps
- Ask your client about their challenges, expectations, and perceived business consequences as these relate to our IQVIA MDM solutions and compatible offerings (if necessary conduct independent research using in-house IQVIA resources as well as external resources)

- Learn how to clearly articulate the "Why" of how IQVIA MDM related offerings are best-in-class, best for your client, and best in outcome
- Answer all questions and objections during the sales process; and if you don't know the answer, provide the following: "I'm not certain at this moment, but I will find out and get back to you ASAP."
- Know your go-to IQVIA resources for answering tough client questions; and know whom you should involve to support you throughout all stages of the sales process
- Seek to thoroughly align client expectations with IQVIA project team capabilities
- Track results
- Tune-in to opportunities to up-sell and offer growth (partners for life)

  - If I put what I've learned so far into action, what may I expect?

Potential key benefits to be gained at this milestone:

- As your effectiveness with your clients increases, you will likely see…
  - Gains in revenue that are proportionate to your efforts
  - New opportunities emerge
  - Increased sense of focus and prioritization
  - Clear strategy development goals
  - Improved mitigations strategies (and the capacity to predict an upcoming impediment)
  - The ability to easily address tough questions
  - The emergence of trust-based relationships and future prospects (often by referral)
  - Expert knowledge of your client's business
  - Pinpoint accuracy in identifying "real" opportunities
  - An intrinsic understanding of why your client chose IQVIA's solutions capabilities

(Continued on next page)

- IQVIA Reltio MDM Use Case Scenario

  Let's engage in a practical application of what you've learned so far by formulating a Use Case Scenario.

  - Discovery: The Client Situation

Client Situation: Summary

A top 10 pharma company faces challenges to organize their data in a centralized structure while supporting the various end-user systems utilized across their broader organization.

As a current IQVIA customer, the client uses IQVIA data in over 25 markets with a variety of different point-to-point connectors that reach several end-user systems.

The main challenge faced by the client is a decentralized management approach for the data (IQVIA and internal), which limits integration with third party technology and blocks effective communication and harmonization between all end-user systems.

Client Situation: Additional Discovery Points

With an upcoming product launch, the client wants to implement a MDM solution quickly that would support more consistent go to market planning and execution on a broad scale while achieving the following:

- Broad data integration and sharing across systems
- Companywide hierarchies, relationships and identifiers definition
- Coherent management of NON-QuintilesIMS data
- Centralization of promotional messages management

Client Situation: Technology Requirements

The following technology requirements were emphasized when speaking with the client's CTO and Technology Team:

- Effective SaaS model to avoid all hosting and release management issues and costs
- Solution hosted in EU to respect DPL requirements
- Phased approach for a multi-country and multi-domain deployment
- Post deployment scalability
- User-friendly Interface with data stewardship capabilities

Solutions Think Tank

With the information provided thus far...
- MDM features, benefits, and value proposition
- Client challenges and solutions
- The Client Situation

...think about **how you would present the IQVIA Solution** to this client.

Helpful Hint

Use the following Key Decision Drivers as a baseline:
- Scalability
- Provider Flexibility
- Maximization of Total Cost of Ownership (TCO)

Using your laptop, or pen and paper, write down some solutions you might consider when provided with this information.

Keep your ideas handy so that you may compare your approach with our proposed IQVIA Solution, which we will present next.

  - Action: The IQVIA Solution

    Key Decision Drivers: Scalability, Provider Flexibility, and Maximization of Total Cost of Ownership (TCO)

The IQVIA Solution

After the IQVIA team understood the full requirements outlined by the client, a comprehensive strategy was designed and implemented:

- Introduction of a single MDM solution powered by Reltio with a multi-domain tenant hosted in Europe
- Integration of CRM, ERP data, and other manual data sources
- Ability to leverage Integrated Delivery Network (IDN) / Group Purchasing Organizational (GPO) organizational management by Graph Technology and OneKey HCO
- Full integration of promotional Key Messages MDM and downstream consumers in CRM, CLM & MCM
- Seamless integration with OneKey data, enabling the focus on relevant HCPs for daily business utilization and instant access to global data
- IQVIA as single solution provider for licenses, implementation, ongoing support, and consultancy

The IQVIA Solution and The Client Solution Outcome

The IQVIA team was able to deliver a successful solution that met the technology requirements of the client, while also supporting a key product launch deadline.

Current implementation is in Phase I which covers 17 markets grouped in two clusters (no localization) and a base solution configuration to be delivered in a 3-month timeframe.

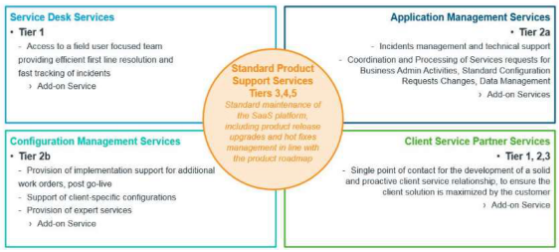

Moving forward, Phase II will include an additional 8 markets plus advanced functionalities delivery.

  - Results: IQVIA Key Differentiators

IQVIA Key Differentiators

- 50 years of data expertise in 100 countries
- "Out of the Box" HCO/HCP data model both for implementation and ongoing services
- Compliance due to global knowledge of data and compliance regulations in the different markets
- Single point of accountability for software, data and service for the essential task of enterprise data management
- Reltio Cloud MDM technology that:
  - Provides real-time Customer Master synchronization among client systems (CRM & ERP)
  - Maintains relationships between entities (IDN – Integrated Delivery Network, GPO – Group Purchasing Organization, HCO, HCP), which feeds into the Business Intelligence platform and supplies a proper ROI measurement

The harmonization of Tech Solutions **Ongoing Services** has been developed to support our clients' field users as well as their home office and champion users – and this initiative has been driven from the launch of new offerings such as OCE or Reltio MDM, as well as the global alignment requirements of the IQVIA offerings.

Module 3: Winning the Business

Examining client Request for Proposal (RFP) requirements and building a winning response

Theme: Self-guided learning that offers actionable insights into the following:

- **Review and understand client RFP/Proposal requirements:**
  - Scope
  - Goals
  - Current Environment
  - Target Environment
  - MDM Technical Requirements
- **Writing a winning Proposal response that addresses:**
  - Current Scenarios and Success Factors
  - Our IQVIA Value Proposition
  - Solution Approach
  - Implementation Methodology and Best Practices

- Examining the Client Request for Proposal Requirements (RFP) Requirements
  - Client RFP: Scope

Client RFP: Scope

The Client's business is divided into three divisions to offer specialized products and services, grouped according to the distinctive needs they meet:

- **Bioscience**: This division specializes in the research, development, production, and marketing of high-quality, plasma-derived therapies (Client's original product line).
- **Diagnostic**: This division focuses on research, development, manufacturing, and marketing of in vitro diagnostic products for laboratory analysis, and products for hospital blood banks and transfusion centers.
- **Hospital**: The hospital division produces sterile IV solutions for specialty therapies such as pain management, oncology, and pediatrics. It also provides simple, cost-effective solutions to operational challenges in the hospital pharmacy.

The **Immediate Scope** for this RFP initiative is the North America (NA) Bioscience Customer MDM domain.

However, the solution must be scalable to support future Master Data Management (MDM) processes across **Diagnostic** and **Hospital** divisions, as well as being capable of managing additional objects such as vendors or materials.

Therefore, the MDM solution must be flexible to accommodate growing amounts of data, as well as a broader set of business requirements.

Solutions Think Tank

Think ahead...Think Proposal...

Using your laptop, or pen and paper, write down what you consider to be the most relevant components of the Client RFP Scope that will be addressed in your Proposal response.

Keep your ideas handy. We'll reveal the IQVIA Response later in this module.

Click Here to Download

  - Client RFP: Goals

Client RFP: Goals

The Client's main business goals for an MDM Solution are stated as follows:

- Improve customer data quality
- Deliver high-trust customer data for both analytical and operational use
- Harmonize customer data across sources
- Achieve workload efficiencies in the reconciliation process
- Establish a customer Golden Record (Master Record / Single Source of Truth)

Solutions Think Tank

Think ahead...Think Proposal...

Using your laptop, or pen and paper, write down these Client RFP Goals and consider how you might address them in your Proposal response.

Keep your ideas handy. We'll reveal the IQVIA Response later in this module.

- Client RFP: Current Environment

Client RFP: Current Environment

1. The Client has multiple sources of customer data across their North America business units, including:
   - SAP [Direct Sales]
   - Salesforce [SFD for Call Activity and Marketing]
   - Customer's Data Warehouse [Indirect Sales]
   - Revitas [Rebates and Chargebacks]

   Note: Revitas provides integrated solutions for contract, revenue, and compliance management. It enables companies to create, execute, and manage contracts and channel sales incentives on premise and in the cloud.
2. There is no single source of information where all customer entities are present.
3. There is no connectivity across multiple systems.
4. Because of 2. and 3., obtaining complete and accurate customer records is resource-intensive and requires a significant amount of data manipulation.
5. The Client's customer base is composed of 300,000 organizations, with over 1.3 million individuals.
6. The Client's home office staff and sales force is composed of 500+ individual users.

Solutions Think Tank

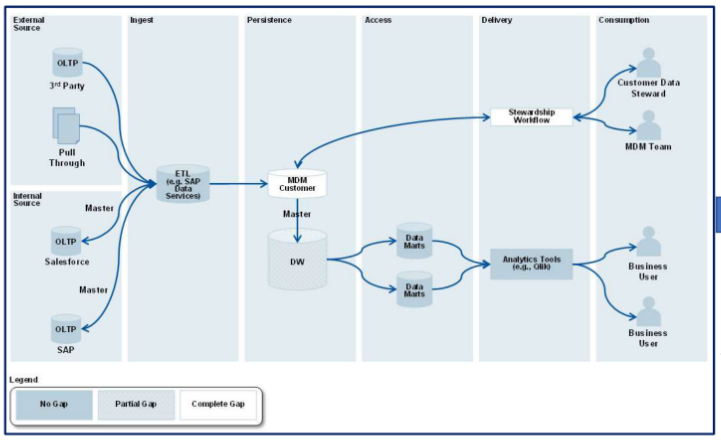

Think ahead…Think Proposal…

Using your laptop, or pen and paper, take note of the Client's current environment (and expressed needs) and consider how you might address them in your Proposal response.

Keep your ideas handy. We'll reveal the IQVIA Response later in this module.

- Client RFP: Technical Requirements Capabilities

1	Centralize the creation and modification of customer master data and other objects such as vendors or materials	11	Solution must support North America (NA) Bioscience Customer being managed in the new MDM tool, while non-NA customers await organization and inclusion in the MDM solution
2	Automate and monitor different process steps and process owners using workflow, alerts, reminders, reports, etc.	12	Add new master data object (example: a new division) in the future
3	Consolidate customer master data from different sources in a golden record / master record / single source of truth	13	Include additional fields in the MDM tool that are not existing fields in the source systems
4	Distribute golden record to relevant systems	14	Set up rules to assess the quality of customer master data when it is created or maintained
5	Customize the input screens used by the users making create/change requests, while only displaying relevant fields for enhance user experience	15	Check existing customer master data vs. specific data quality rules, and identify records not meeting the defined criteria
6	Schedule releases of customer master data to and from different systems	16	Produce scorecards and/or reports based on data quality rules
7	Track customer master data changes	17	Automatically detect and correct records that do not meet data quality standards based upon pre-defined rules
8	Manage massive customer master data changes based on updating rules	18	Match and Merge capability that will identify and consolidate duplicates (particularly customers with the same NIF/Tax indicator)
9	Automatically populated fields based on pre-defined rules	19	Automate and reuse master data migrated from external systems (particularly decommissioned legacy systems and data obtained from the acquisition of new companies)
10	Exclude some fields from approval – based on organization and field combination		

Solutions Think Tank

Think ahead…Think Proposal…

Using your laptop, or pen and paper, take note of the Client's technical requirements capabilities and consider how you might address these in your Proposal response.

Keep your ideas handy. We'll reveal the IQVIA Response later in this module.

(Continued on next page)

- Building a Winning Proposal Response
  - Analytical Approaches to Sales Success
    - Using the information provided thus far, and in consideration of your own independent take-aways (which hopefully you've written down in your Solutions Think Tank space), you should be **informed** and **capable** of moving into the proposal build stage as you **identify** and **solve-for** the following:

- Remember RFP/RFI Response Guidelines (Best Practices)
- Current Scenarios and Success Factors
- Our Value Proposition
- Solution Approach
- Implementation Methodology and Best Practices

  - Remember the RFP/RFI Response Guidelines

Best Practices

- **Sales Leadership assigns one Sales Lead (one RFP/one sales lead)**
  - To streamline decisions, assign one Sales Lead who is responsible for making and communicating final decisions on sales/competitive strategy, proposed product(s), pricing and responses
- **Sales Lead conducts a sales strategy call prior to the RFP kick-off call**
  - Sales team agrees on the sales strategy, proposed product(s) and pricing approach prior to the RFP kick-off call
- **Response team agrees to an RFP "freeze" date – no more changes to the RFP as of 'X' date**
  - In order to produce a professional, quality response, the sales lead needs time to conduct: quality assurance checklist, editing (e.g., one voice, consistent tense, consistent messaging, etc.), proofreading, and formatting
- **Both the Sales Lead and Response Team are proactive – don't create "fire drills"**
  - Complete your action items/responses on time in accordance with the project timeline; follow-up, ask for help and/or escalate when needed
- **Everyone practices "Email Etiquette"**
  - Don't use an existing 'Subject' line that is unrelated to the content of your email (i.e., forwarding an unrelated email thread and including new action items or info unrelated to the original thread)
  - Refer to the title of the RFP in the 'Subject' line and indicate if an urgent response is needed

  - Current Scenarios and Success Factors
    - IQVIA's Understanding of the Client's Current Scenario (as-is) and the Envisioned State (to-be)

Client's Current Scenario

- Client is looking to implement a scalable Customer Data Management solution within the Bioscience Customer MDM domain
- Today, different teams in North America and Canada use a number of data sources and don't have the integrated view of a customer or a "golden record"
- There is not a single source of information where all customer entities are present
- There are limitations to the number of connections across these systems
- Significant manual data manipulation and resourcing challenges across Client's different functions like third party direct and indirect sales, rebates, charge back activity and marketing data

Client's Envisioned State

- Improved and unified customer data
- Streamline the HCP/HCO master and create an operational view to be used in the Enterprise Data Warehouse
- Harmonize customer data across sources with defined quality checks
- Achieve workload efficiencies in this reconciliation process
- MDM to accommodate growing amounts of data, as well as a broader set of business requirements in the future
- Solution to support seamless scalability to other countries beyond US and Canada in the long term
- Possibility to integrate with other downstream business applications

Key Themes:

- Single source of customer master data
- Enriched customer data
- Seamless integration
- Data governance

    - How IQVIA's Capabilities Align Directly with the Critical (Key) Success Factors Necessary to Deliver the Envisioned State (the Vision)

Key Success Factors		IQVIA Capabilities
Enhance Customer Data Management *Execution relevant to scope*	• Seamless Integration of different source • Adoption form the country owners and users • Drive governance and operational efficiency in customer data management	• Pre-built accelerators to help integration • MDM change management model to help adoption • MDM and data governance expertise to industry-leading operating plan
Implementation Excellence *Best value for your investment (effective)*	• On-time and on-Quality Implementation • Ensure smooth execution and operational handover • Successful user acceptance	• **Accelerators** for expedited implementation • Proven implementation model with Global and Local experts in included in execution • Integrated Reltio Professional services to gain on-demand consulting
Time to Value *Faster return on investment*	• Quickly demonstrate impact to customers • Low-cost, high-impact foundation upon which to build	• Global **Center of Excellence (CoE)** for Swift Delivery • **Multiple Reltio implementations** at large life-sciences clients • Usage of unique accelerator capabilities on top of Reltio platform
Data Synergy *Leverage existing investments*	• Pre-built quality standards with effective data quality checks	• Complete end to end offering through integrated services • Standard and best-practices developed through decades of experience in data governance and stewardship
Strategic Enablement *Enablement of tomorrow's roadmap*	• Scalability to additional countries & data sources • Potential inclusion of customer golden records in downstream apps	• Leverage Global MDM CoE • Fully utilize IQVIA accelerator assets – OneKey Integration, application integration • Add value in integrating HCP data in potential compliance initiative

  - Our Value Proposition
    - IQVIA Brings End-to-End Capabilities to Successfully Deliver MDM Transformations

For Enterprise Information Management	
People	• **Strategic** blend of industry, consulting and data experts • **100% dedicated** to Life Sciences • Information Management is at our core • Local Life Sciences **data experts** specialized in each country's healthcare data uniqueness
Data	• **85%** of global pharma sales • Over **18.3 million** HCPs globally • More than **1 million** HCOs globally • Over **530 million** anonymized patient records worldwide
Process	• **Best practices** processes for implementation of Information Management solutions • **SOPs** and **metrics** for commercial operations support • Built **exclusively** for life sciences • **800K** data feeds and **100k** data suppliers

Governance	• Industry's **best practices** in data governance strategy and data stewardship execution • **55+ billion** Transactions governed annually
Technology	• **Scale** and **performance** of big data cloud • **Unique IP** via connectors and data model • **Leader** in Forrester's Wave for MDM

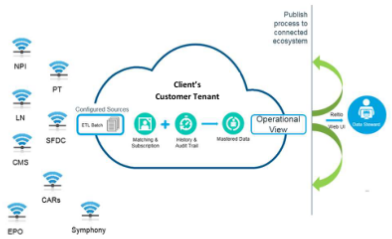

- Why IQVIA Should be the Client's Partner of Choice

How IQVIA will successfully deliver your current requirements	• Our market knowledge and technology leadership • Our knowledge about the data model and integration nuances – NPI, SFDC, etc. • Our depth of Reltio partnership - unique accelerators build on Reltio platform • Local and global team – Presence in EU and US ascertained in project delivery • Our MDM implementation CoE - Best practices specifically tailored for MDM implementation
How IQVIA will help you in future scalability	• Scalability of MDM solution globally beyond the current scope of US and Canada • Fully utilize IQVIA accelerator assets – OneKey Integration, application integration • Add value in integrating HCP data in other potential initiative e.g. HCP spend transparency • Ability to provide consulting and services in data governance and ongoing multi-country stewardship • Unique transaction data integration solution built on Reltio platform (Commercial Data Hub)
How IQVIA will provide you with the best team, along with robust governance	• Local customer success manager • Availability of US resources to cover implementation site • Oversight from MDM lead, Delivery Head, Senior leadership • Quality standards, Governance structure and stage gates are defined to proactively track progress and manage risks during implementation • Reltio professional service is integrated with the delivery team with clear roles and responsibilities • Flexi commercial model with fixed cost for current phase and ability to invoke on-demand service

- IQVIA's Solution Approach
  - Leveraging IQVIA Expertise and Reltio Partnership

The IQVIA Difference

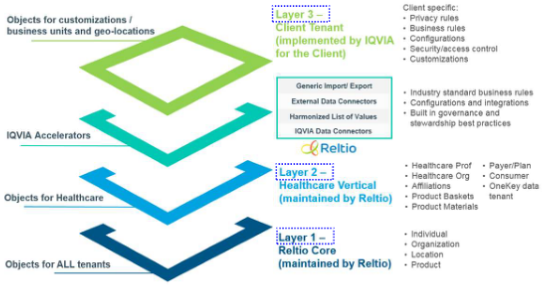

- In answer to the Client's requirements, the Mastered Data is available for publishing to the IT ecosystem
- ETL Batch processes help bring data into the Reltio tenant
- Match and Merge rules, Configuration parameters, and Survivorship Rules build a 360° view of the Customer Record.
  - According to the stated Client requirements, this view is available for export so that it can be shared with relevant systems.
- The Data Steward can access the Reltio UI to perform stewardship activities

  - IQVIA's Unique Reltio MDM Accelerators are Configured on Multiple Layers to Provide Speed, Quality, Efficiency, and to Facilitate the Client's Implementation Plan

The IQVIA Difference

- **Expedited Implementation** through pre-built components
- **Accelerator Stack -** IQVIA has created an abundance of products to empower Reltio and speed up data input and output
- **Simple to Manage, Flexible Support -** The IQVIA-configured accelerators become a part of the Client layer post-implementation.
  - This Client layer can be maintained and supported by Reltio or any other internal/external support team post-implementation

- Implementation Methodology and Best Practices
  - IQVIA's Adaptive Implementation Methodology (Phased Approach)

  - Key Assumptions for Driving Implementation

Implementation Scope

- Overall Project Management (with the exclusion of the **MDM Tenant Set-up,** which Reltio will provide)
- MDM Domain(s): **Customers**
- **Data Modelling**, **Matching Rules Set-up** and **Survivorship Rules** to be implemented at **Global level**
- **Modelling/Design** will be performed once at global level and will be then deployed against all the target Countries and/or Clusters. No substantial changes are included at Country/Cluster level
- **Matching Rules/Survivorship Rules Definition** will be defined globally. The refining/adapting of Workflow, Match & Merge, and Survivorship rules at Countries/Clusters level is not included
- Two Countries (**US and Canada**) will be grouped in a Cluster
- **8 inbound data sources** to be integrated – **inbound Extract, Transform, & Load (ETL) included**
- **Data Sources in scope (8) will be integrated** once for all the Countries/Clusters **at Global level**. This implies the same data source inbound/outbound format for all the countries and the same ETL inbound

- IQVIA, Reltio Professional Services, and Client Project Leadership Collaboratively Drive the Implementation

- Sample Project Delivery Plan
