Sales Intelligence Lab

User Guide | Version 2.3

Sales Intelligence Lab

The Enterprise Discovery Challenge

How to navigate and complete an interactive enterprise sales simulation: customer discovery, stakeholder intelligence, value articulation, and objection handling.

1. Customer discovery
2. Stakeholder intelligence
3. Value articulation
4. Objection handling
5. ★ Performance debrief

Portfolio demonstration, Version 2.3. Halvorsen Therapeutics, Aperion, Aperion Data Cloud, and every person, record, and figure in the simulation and in this guide are fictional. This is a practice simulation, not a production system or the training program of any company.

Screenshots were taken from Version 2.3 using fictional sample choices, and they are captured before feedback appears, so they don't reveal correct answers. Numbered orange markers are annotations added for this guide; they don't appear in the application.

How to use this guide

Sections 1 to 3 orient you to the scenario, the screen, and the Deal room. Sections 4 to 8 follow the simulation in order, one stage at a time. Sections 9 to 11 cover scoring, accessibility, troubleshooting, and a one-page quick reference.

The guide explains how each activity works and how it is scored. It deliberately does not identify correct questions, roles, messages, matches, or responses, so the simulation remains a fair practice experience.

1. Welcome and overview

Sales Intelligence Lab: The Enterprise Discovery Challenge is a browser-based simulation of a complex enterprise sale. You play an account executive working a single opportunity from the first discovery call to the follow-up meeting where the buying group pushes back.

Purpose

The simulation gives you a safe place to practice the judgment calls that shape enterprise deals: which questions to ask, whose priorities matter, how to connect capabilities to outcomes, and how to respond when a stakeholder objects. Every decision has a visible consequence, and every point in your final score can be traced to a specific choice.

The scenario

	In the simulation
The customer	Halvorsen Therapeutics, a mid-size specialty pharmaceutical company with three divisions (Biologics, Diagnostics, and Hospital Solutions) selling in 14 markets, including several in the European Union.
The problem	Customer data lives in four systems that were never designed to talk to each other, so the same hospital appears under different names, IDs, and addresses. A data-quality issue recently delayed a rebate payment to a key account.
Your role	An account executive at Aperion, which sells Aperion Data Cloud: a cloud master-data platform that creates one governed record for each customer and keeps connected systems in sync.
The buying group	Three Halvorsen stakeholders with different priorities, concerns, and levels of influence. You meet them in Stage 2.

What you will practice

The simulation has four stages. Each stage is scored on one competency.

Stage	What you do	Competency scored
1. Customer discovery	Choose five of ten questions for a first call.	Discovery effectiveness
2. Stakeholder intelligence	Identify each stakeholder's role and choose a tailored opening message.	Stakeholder alignment
3. Value articulation	Match capabilities to requirements, classify statements, and compose a value proposition.	Value articulation
4. Objection handling	Respond to four objections, with one chance to revise each response.	Objection handling

Who it is for

Sales professionals practicing enterprise selling skills; sales enablement teams and managers looking for a coaching conversation starter; learning and development professionals interested in scenario-based assessment design; and portfolio reviewers evaluating the project.

How long it takes

> **Estimate.** Plan on about **30 to 40 minutes** for a first, unhurried run, and about **15 to 20 minutes** for a repeat run. These are estimates based on the number of decisions (27) and the amount of reading in each stage. They have not been measured with participants.

There is no timer. You can take as long as you need on any decision.

2. Getting started

Launching the simulation

Open the address where the simulation is hosted, or open `index.html` from the project folder in a current web browser. No account, login, installation, or internet service is needed once the files are loaded. The simulation opens on the **Brief**.

> **Progress is not saved.** Your progress exists only in the open browser tab. Refreshing or closing the page starts the simulation over from the Brief. Nothing you choose is sent anywhere or saved between visits.

Browsers and devices

Status	Browsers and screen sizes
Tested	Chromium, the engine used by Google Chrome and Microsoft Edge, in automated testing at desktop widths from 1,181 to 1,600 pixels, at a tablet width of 820 pixels, and at phone widths of 320 and 390 pixels. The tablet and phone sizes were emulated, not tested on physical devices.
Recommended	A current version of Google Chrome or Microsoft Edge on a laptop or desktop computer, with a window at least 1,280 pixels wide for the full side-by-side layout.
Not yet tested	Mozilla Firefox, Apple Safari (including on iPhone and iPad), Samsung Internet, and physical phones and tablets. These are expected to work because the simulation uses standard web features, but this has not been verified.

The Brief

The Brief introduces the account, its business challenges, your role, and the four-stage journey. Read it before you begin. Facts in the Brief come up again later in the simulation.

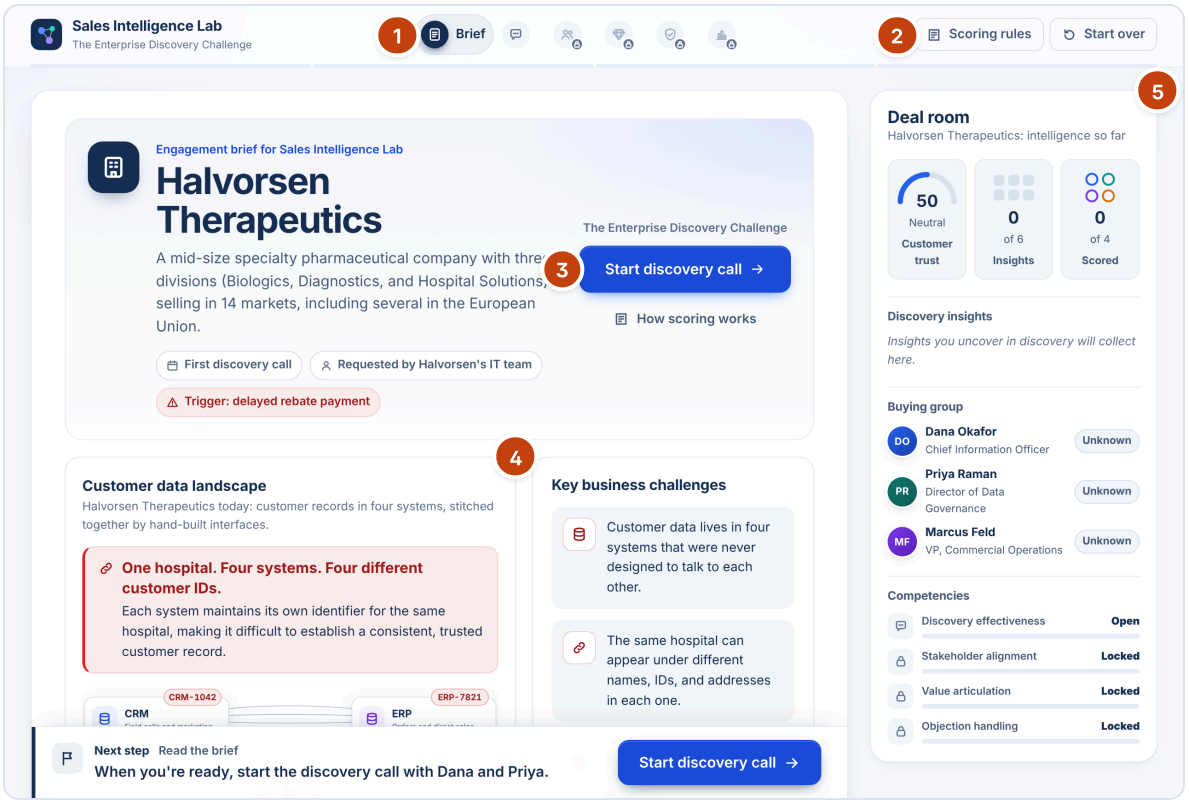

Figure 1. The Brief at a laptop width, with the Deal room on the right.

1. The **stage navigation**. Each icon is a stage; the current stage is highlighted.
2. **Scoring rules** and **Start over** are available from every screen.
3. **Start discovery call** begins Stage 1.
4. The **Customer data landscape** diagram (Figure 2).
5. The **Deal room**, which tracks what you learn (section 3).

Navigating between stages

The stage navigation at the top of the screen shows six steps: Brief, Discovery, Stakeholders, Value, Objections, and Debrief. Each step shows its state:

State	How it looks	What it means
Current	Filled icon in the stage color	The stage you are viewing.
Complete	Small check badge on the icon	You finished the stage. Open it any time to review your choices and feedback. Answers are locked.
Locked	Small lock badge on the icon	Not available yet. Stages unlock in order as you finish the one before.

A thin progress bar under the navigation fills in each stage's color as you complete it. On narrower screens, the navigation shows icons only.

Locked stages explain themselves. If you select a locked stage, a notice says which stage you need to finish first and offers a button that takes you to your current stage.

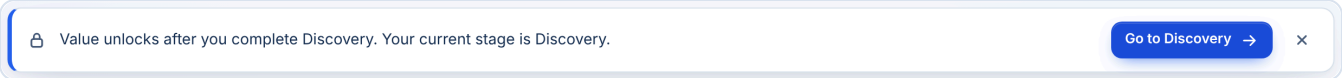

Figure 2. The notice shown when you select a locked stage.

The Next step bar

Every screen ends with a **Next step** bar in the stage's color. It stays in view at the bottom of the screen while you scroll, and it always answers three questions: where you are, what to do now, and how to continue.

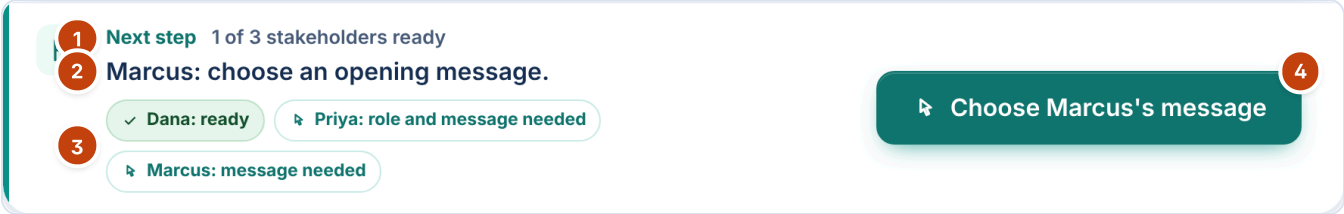

Figure 3. The Next step bar during Stage 2, with one stakeholder ready and two still in progress.

1. Your **status** in the stage, such as how many stakeholders are ready.
2. The **next step**, in plain words.
3. **Shortcuts** to anything still missing. Select one to jump straight to it.
4. The **primary button**, which always does the next useful thing.

- The primary button is never just disabled. Before a stage is complete, it takes you to the next choice you need to make, such as *Choose question 2* or *Choose Dana's role*. When everything is complete, it changes to the action that moves you forward, such as *Submit stakeholder plan* or *Continue to objections*.
- The bar updates after every selection, confirming what you just did and naming what comes next.
- Secondary actions, such as *Keep this response*, appear beside the primary button in a quieter style.
- On phones, the bar also names the current stage, because the navigation shows icons only.

Reading the Customer data landscape

The diagram on the Brief shows why Halvorsen's data is hard to trust: one hospital is recorded four different ways, in four systems connected by hand-built interfaces.

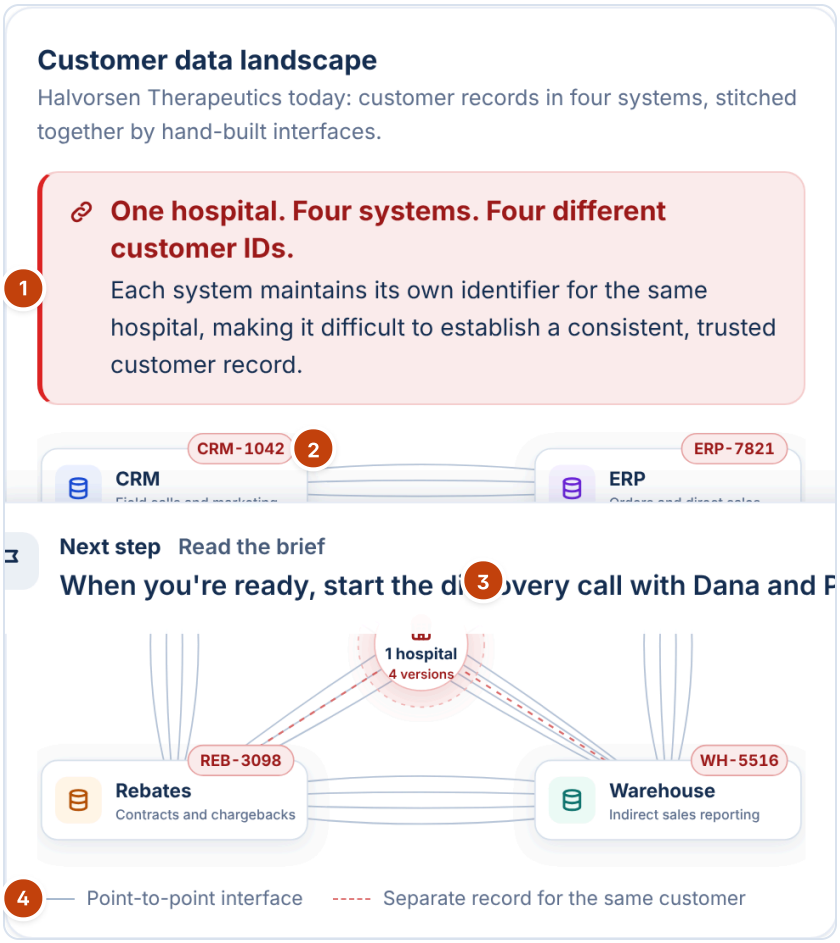

Figure 4. The Customer data landscape diagram.

1. The explanation: one hospital, four systems, and four different customer IDs.
2. Each system's own record ID for the same hospital, such as CRM-1042.
3. The hospital at the center, held as four separate versions.
4. The legend: solid lines are point-to-point interfaces (23 in all); red dashed lines connect each system's separate record for the same customer.

Scoring rules

Select **Scoring rules** in the top bar, or **How scoring works** on the Brief, to open a summary of how every competency is scored. Close it with **Close** or the `Esc` key. Section 9 of this guide covers the same rules in more detail.

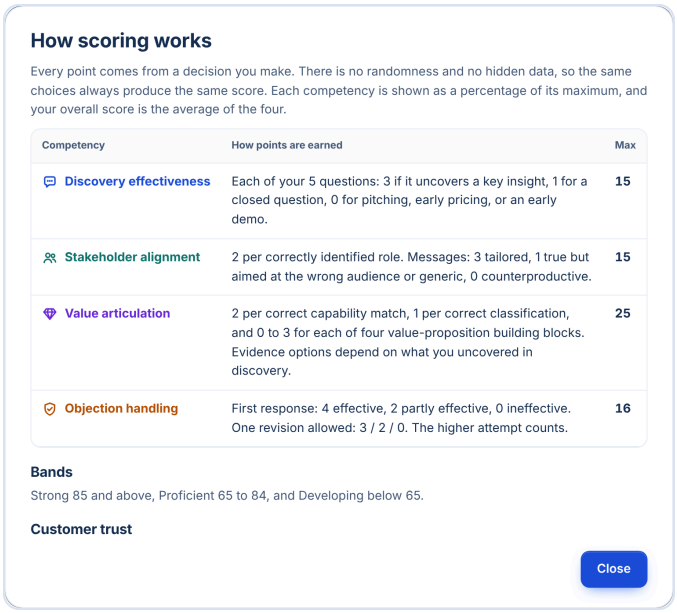

Figure 5. The Scoring rules window.

3. Understanding the Deal room

The Deal room is your running account plan. It sits beside the workspace on larger screens and updates as you make decisions.

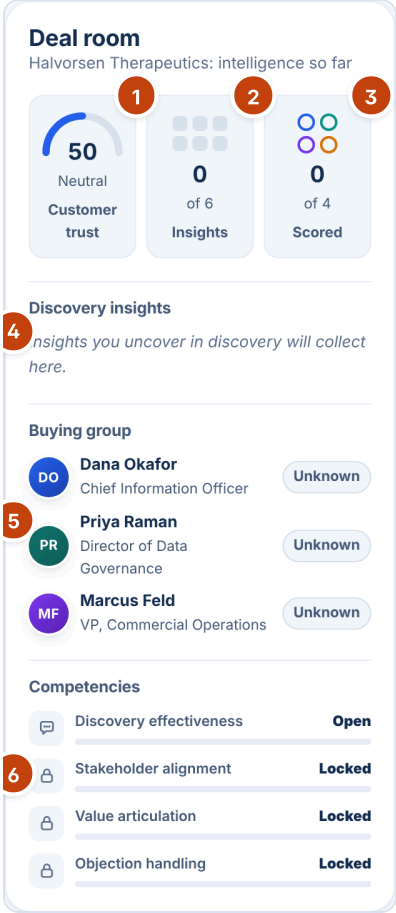

Figure 6. The Deal room at the start of the simulation.

	What it shows
1 **Customer trust**	A gauge from 0 to 100 that starts at 50 and is labeled *Engaged* (70 and above), *Neutral* (45 to 69), or *Guarded* (below 45). It reflects how the customer is reacting to you.
2 **Insights**	How many of the six possible discovery insights you have uncovered.
3 **Scored**	How many of the four competencies have been scored.
4 **Discovery insights**	A card for each insight you uncover, with its details.
5 **Buying group**	The three stakeholders. Each shows the role you assign in Stage 2. These are your choices, not an answer key.
6 **Competencies**	Each competency's status (Open, In progress, or Locked), then its percentage once scored.

How your decisions change the Deal room

- **Trust** moves with your discovery questions and your objection responses. Productive questions and effective responses raise it; pitching, premature requests, and poor responses lower it. Trust is feedback about the relationship. It is not part of your score.
- **Insights** appear only when a question you ask uncovers them. An insight you never uncover never appears, and it won't be available to you later as evidence.
- **The buying group** shows the roles you assign in Stage 2.
- **Competency bars** fill in as each stage is scored.

> **Smaller screens.** On screens narrower than about 1,180 pixels, the Deal room collapses into a summary bar above the workspace showing trust, insights, and stages scored. Select the bar to expand or collapse it.

4. Stage 1: Customer discovery

Your first call is with Dana Okafor, Halvorsen's Chief Information Officer, and Priya Raman, Director of Data Governance. You have time for five questions out of a bank of ten.

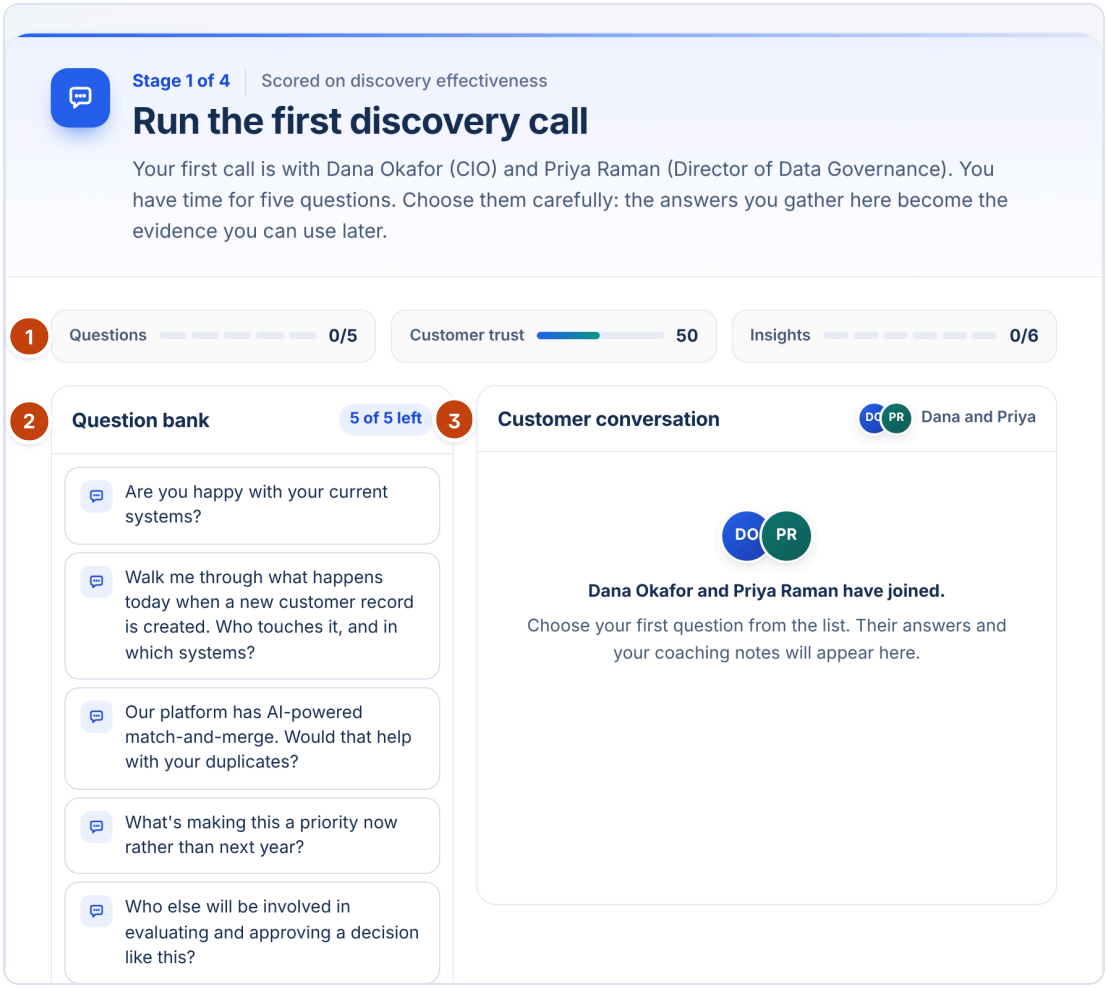

Figure 7. The discovery workspace before the first question.

1. The **call status**: questions asked, customer trust, and insights uncovered.
2. The **question bank**. Select a question to ask it.
3. The **customer conversation**, where answers and coaching appear.

Selecting your five questions

1. Read the stage introduction and look over all ten questions before you ask the first one.
2. Select a question. It is asked immediately and cannot be taken back, just as in a real meeting.
3. Read the customer's answer and the coaching beneath it.
4. Repeat until you have asked five questions. The Next step bar counts your questions, and its **Choose question** button takes you back to the question bank. After the fifth question, the remaining questions are disabled and the button changes to **Continue to stakeholders**.

Questions you have asked stay visible in the bank, numbered in the order you asked them, so you can see your path. After the fifth question, a summary shows your Discovery effectiveness score.

How responses reveal information

Each question gets an in-character answer from Dana or Priya. Beneath it, a short coaching note shows:

- an effectiveness label (*Effective*, *Partly effective*, or *Ineffective*) and the type of question you asked;
- the points earned and the change in customer trust;
- any **insight** the question uncovered; and
- a sentence explaining why the question worked or didn't.

How insights carry forward

Insights are the most important output of discovery. Each one is added to the Deal room and stays available for the rest of the simulation:

Later in the simulation	How your discovery affects it
Stage 2 (Stakeholders)	A note at the top of the stage either shares what you learned about how the decision gets made or points out an intel gap.
Stage 3 (Value)	The *Customer evidence* options in your value proposition are built only from the insights you uncovered, plus one generic option.
Debrief	Your insight count appears on the dashboard, and the development feedback notes when missing evidence limited your value proposition.

> **Tip.** There are more useful questions in the bank than you have time to ask. Think about what you will need later in the deal, not only what seems interesting now.

5. Stage 2: Stakeholder intelligence

Three people will shape Halvorsen's decision. For each one, you identify their role in the buying group and choose the opening message most likely to move them forward.

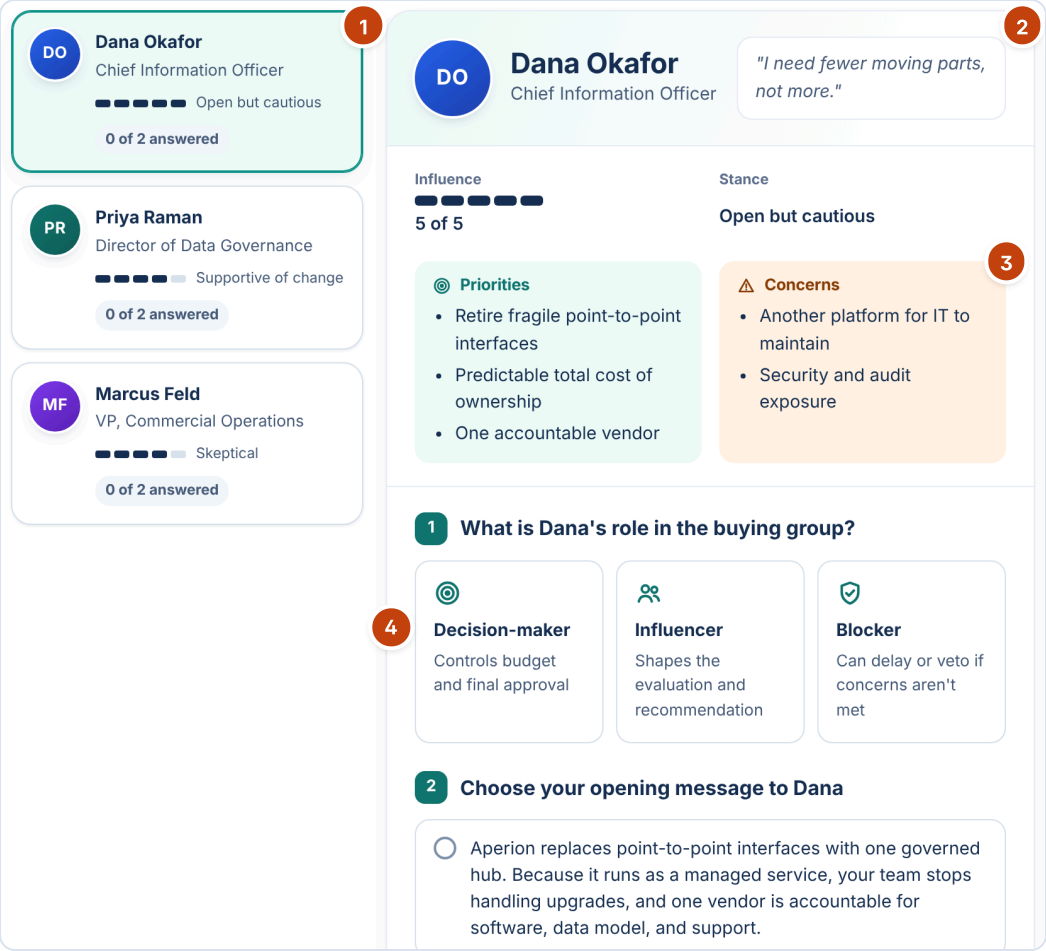

Figure 8. The buying committee workspace before any answers are chosen.

1. A **profile card** for each stakeholder, with influence, stance, and progress.
2. The selected stakeholder's **detail view**, including a quote in their own words.
3. Their **priorities** and **concerns**.
4. The two tasks for each person: **role** and **opening message**.

Identifying buying-group roles

1. Select a stakeholder's profile card. With the keyboard, use the arrow keys to move between cards.
2. Read their influence level, stance, priorities, concerns, and quote.
3. Under task 1, choose the role that best describes them:
   - **Decision-maker**: controls budget and final approval.
   - **Influencer**: shapes the evaluation and recommendation.
   - **Blocker**: can delay or veto if concerns aren't met.

Selecting stakeholder-specific messages

Under task 2, choose one of three opening messages. Every message is about the same product; what differs is whether it speaks to this person's priorities and concerns. Read each option against the profile before you choose.

Each profile card shows its progress (for example, *1 of 2 answered* or *Ready*). The Next step bar names exactly what is still missing, such as *Marcus: choose an opening message*, and its button takes you to that choice or to the next stakeholder. The arrows at the bottom of each detail view also move between people. You can change your answers freely until you submit. When all three people have both answers, the button changes to **Submit stakeholder plan**.

After you submit

Your answers lock, and each stakeholder's detail view shows two separate feedback cards:

- **Role identification**, explaining whether the role you chose fits and why; and
- **Message fit**, explaining how well your message matched the person.

The profile cards summarize your results, the Deal room records your buyer map, and a summary shows your Stakeholder alignment score. Select each card to review all three people.

> **Connection to discovery.** If you didn't ask how the decision gets made during discovery, this stage opens with an *intel gap* note, and you'll need to rely on the profiles alone.

6. Stage 3: Value articulation

After the discovery call, Halvorsen's team sent five business requirements. In the Value Strategy Studio, you translate what Aperion does into what Halvorsen needs, in three parts.

The three parts appear as tabs labeled A, B, and C. Each tab shows its progress (for example, *3 of 5 done*). You can move between tabs in any order and change your answers until you submit. The Next step bar names the items still missing in the part you're viewing and takes you to the first one. When a part is complete, its button offers the next unfinished part, such as **Next: Part B**.

A. Matching requirements with capabilities

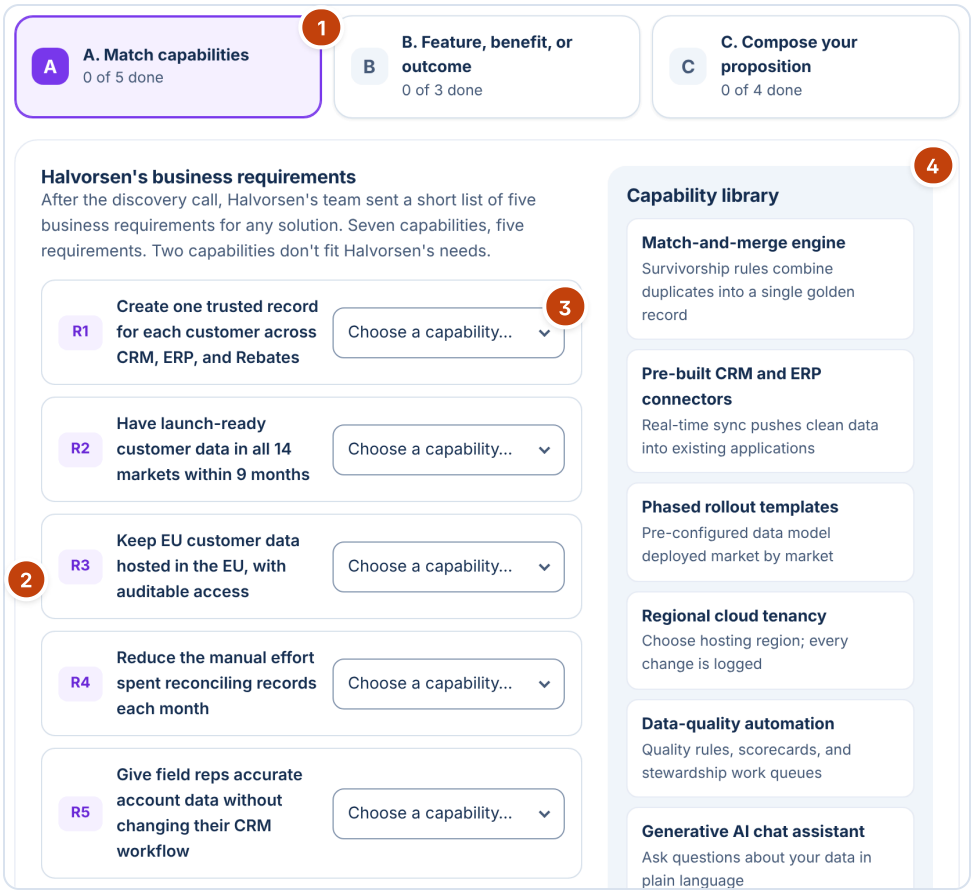

Figure 9. Part A: Halvorsen's requirements and the capability library.

1. The three **studio tabs**, with progress for each part.
2. Halvorsen's five **business requirements**, labeled R1 to R5.
3. A **capability menu** for each requirement.
4. The **capability library**, describing all seven capabilities.

For each requirement, choose the capability that addresses it most directly. There are seven capabilities and five requirements, so not every capability will be used. The library marks each capability you have matched, and how many times.

B. Feature, benefit, or business outcome

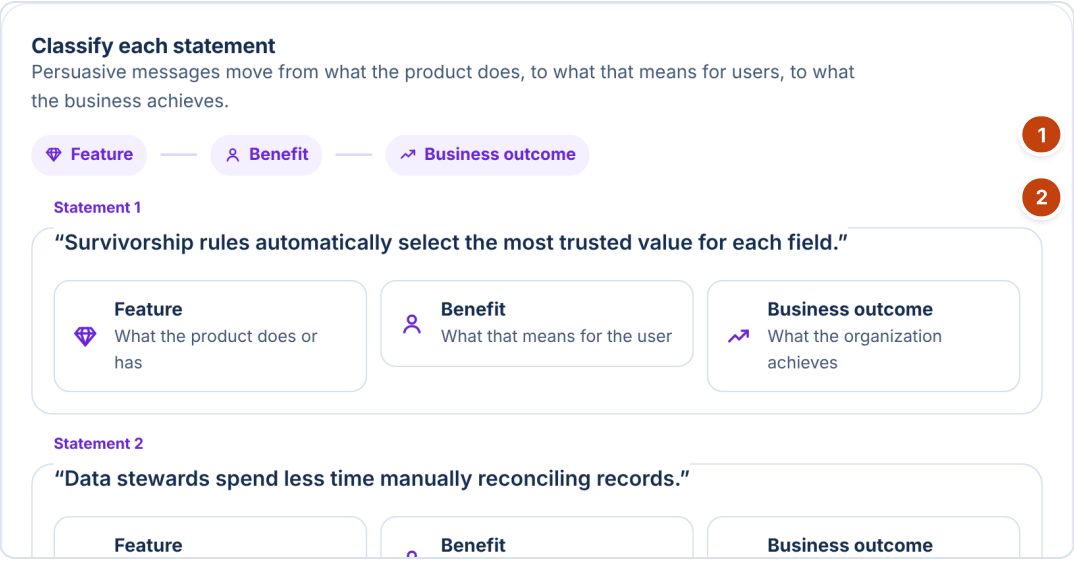

Figure 10. Part B: classifying statements.

1. The **ladder** from feature to benefit to business outcome.
2. Each statement, with its three classification choices.

Persuasive messages move from what the product does, to what that means for the people using it, to what the organization achieves. Classify each of three statements:

Classification	Describes
Feature	What the product does or has.
Benefit	What that means for the user.
Business outcome	What the organization achieves.

C. Constructing the value proposition

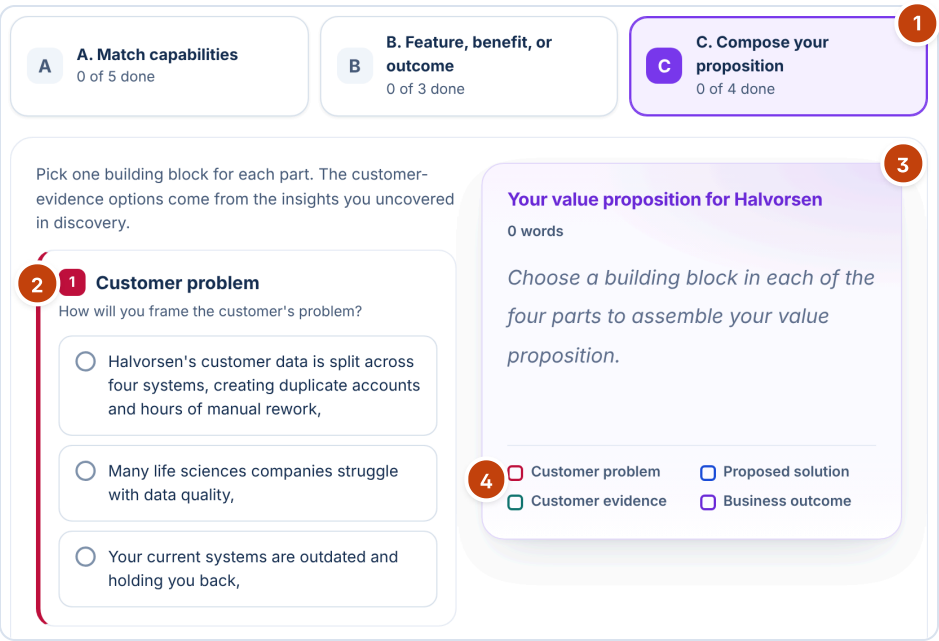

Figure 11. Part C: the composer and live preview, before any building blocks are chosen.

1. The **Compose** tab.
2. The four **building blocks**, starting with the customer problem.
3. The **live preview** of your value proposition, with a word count.
4. The **color legend** for the four parts.

Build your value proposition by choosing one option for each of four parts, in order: the customer problem, the proposed solution, the customer evidence, and the business outcome. The preview assembles your sentence as you choose, color-codes each part, and counts the words, noting whether it fits a 50-word format.

How earlier insights are used

The *Customer evidence* options come only from insights you uncovered in Stage 1, plus one generic claim that is always available. If you didn't uncover a particular insight, it won't appear here. This is how the simulation reflects a real sale: you can only cite what the customer actually told you.

Submitting and reviewing

When all twelve items are complete (five matches, three classifications, and four building blocks), the Next step button changes to **Submit value proposition**. After you submit, your answers lock, each tab shows feedback for every item, and a summary shows your Value articulation score with a breakdown by part.

> **Coaching example.** After you submit, Part C also shows a *Coaching example* beside your value proposition. It is an instructional model for comparison only. It is not a validated customer claim, and it never changes your answer or your score.

7. Stage 4: Objection handling

Your proposal has landed, and the buying group is pushing back. In the follow-up meeting, you respond to four objections, one at a time.

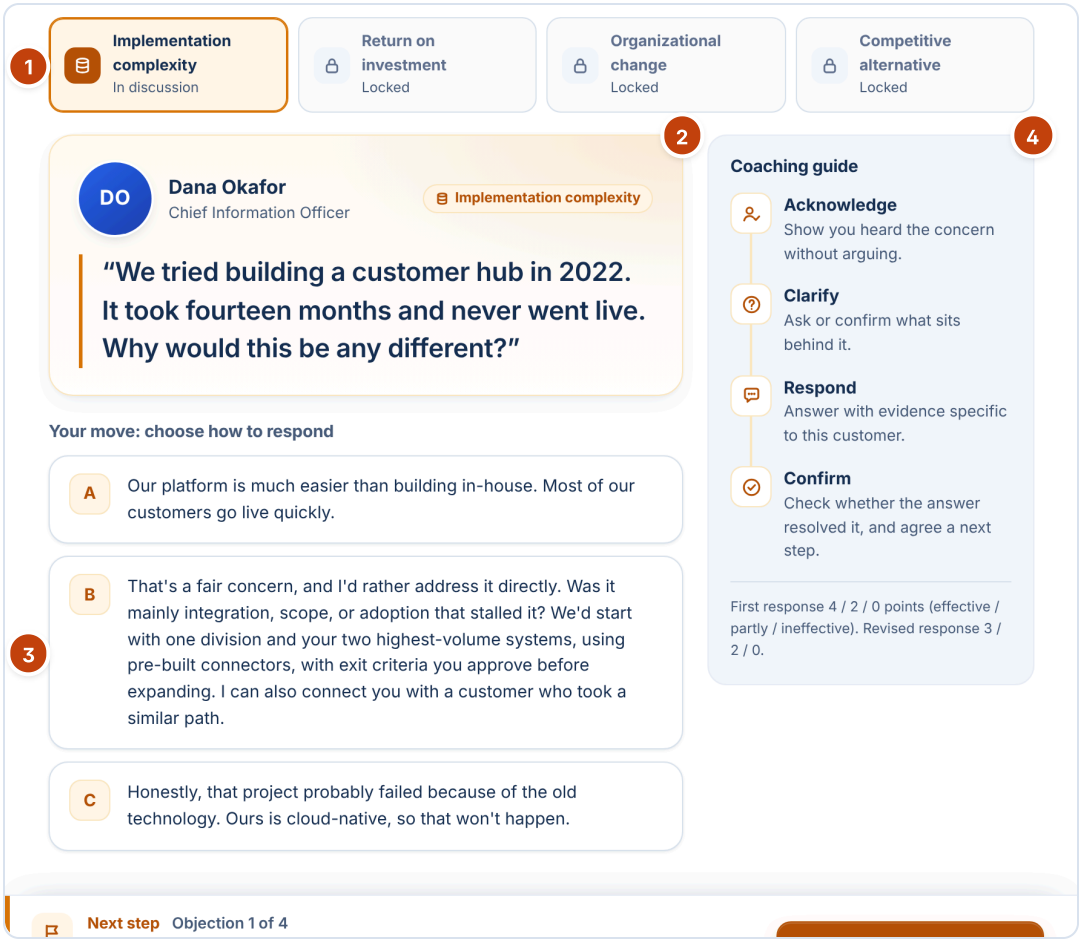

Figure 12. The meeting simulator before the first response.

1. The **meeting agenda**: the four objections and their status.
2. The current **objection**, with the stakeholder who raised it.
3. Three possible **responses**, labeled A, B, and C.
4. The **coaching guide**: Acknowledge, Clarify, Respond, and Confirm.

Responding to the four objections

The objections cover four categories: implementation complexity, return on investment, organizational change, and a competitive alternative. Each objection unlocks after the one before it is resolved.

1. Read the objection and consider who raised it. Their profile from Stage 2 still applies.
2. Review the coaching guide on the right. It describes a four-step pattern for handling objections.
3. Select the response you would give. Your choice is committed immediately. The Next step button **Choose a response** takes you to the options if you've scrolled away.

Customer reactions and coaching

Your choice starts a short conversation timeline below the responses. It shows what you said, how the stakeholder reacted, and coaching that labels the response *Effective*, *Partly effective*, or *Ineffective* and explains why, with the points earned.

The single revision opportunity

If your first response is not fully effective, the Next step bar offers two choices:

- **Try a different response** lets you choose again from the two remaining responses. The response you already used is locked. You get one revision per objection.
- **Keep this response** accepts your first response and moves on.

If your first response is fully effective, no revision is offered, and the bar takes you straight to the next objection.

How the retained score works

Each objection is worth up to 4 points. A revision can earn most, but not all, of the credit for getting it right the first time. Your score for the objection is whichever of your attempts scores higher.

	Effective	Partly effective	Ineffective
First response	4 points	2 points	0 points
Revised response	3 points	2 points	0 points

After each objection, the timeline shows your retained score, and the Next step button names the next objection, such as **Next objection: Return on investment**. When all four are resolved, a summary shows your Objection handling score, and the button changes to **See your debrief**.

8. Performance debrief

The debrief brings your results together in one dashboard. Every score on it comes directly from your decisions.

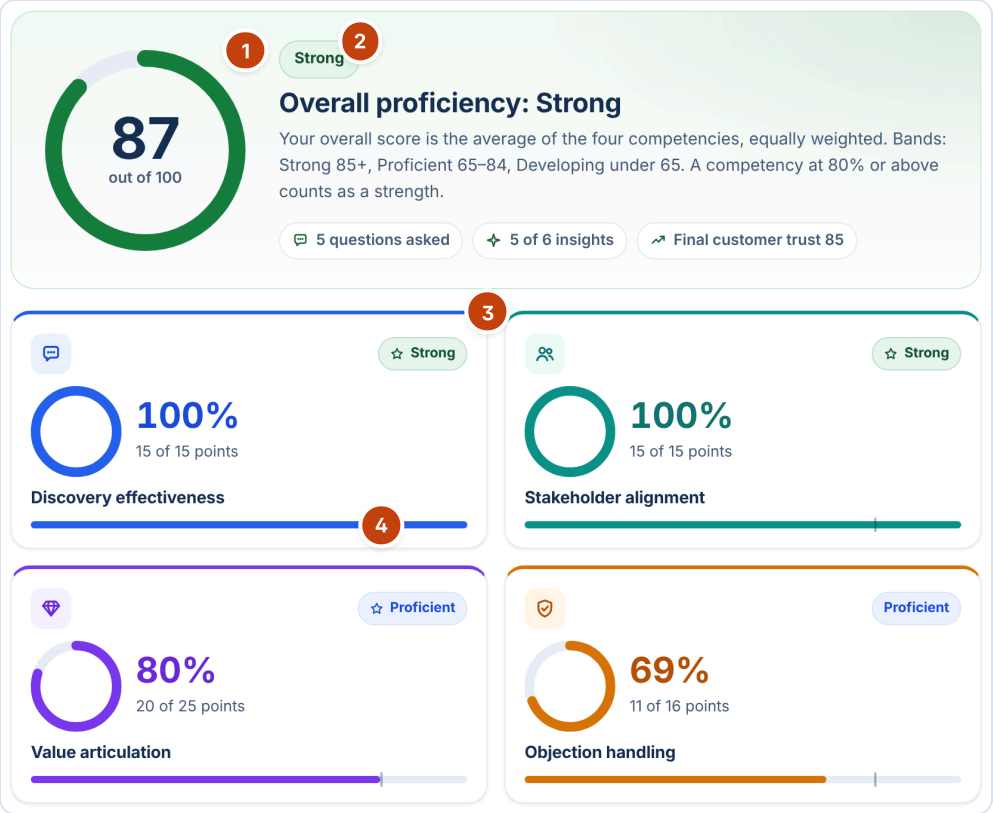

Figure 13. The debrief dashboard for a sample run.

1. Your **overall score**, out of 100.
2. Your overall **proficiency level**.
3. A card for each of the **four competencies**, with its percentage, points, and level.
4. The **strength threshold** marker at 80%.

Overall proficiency and competency scores

Your overall score is the average of the four competency percentages, equally weighted, and is shown with a proficiency level: *Strong*, *Proficient*, or *Developing* (see section 9). Each competency card shows its percentage, the points earned out of the points possible, its own level, and a bar with a marker at the 80% strength threshold. The dashboard also shows how many questions you asked, how many insights you uncovered, and your final customer trust.

Strengths, development opportunities, and next steps

- **Strengths** lists each competency where you scored 80% or above, with a note on what you did well.
- **Development opportunities** lists each competency below 80%, plus notes based on your actual decisions, such as questions that didn't uncover new information, roles you misread, missing

evidence, or objections where your first response missed. Where it applies, it also explains how an initial response affected a stakeholder and what a revision changed.

- **Recommended next steps** suggests practical activities for your development areas, or ways to extend your skills if every competency is a strength.

The decision and scoring log

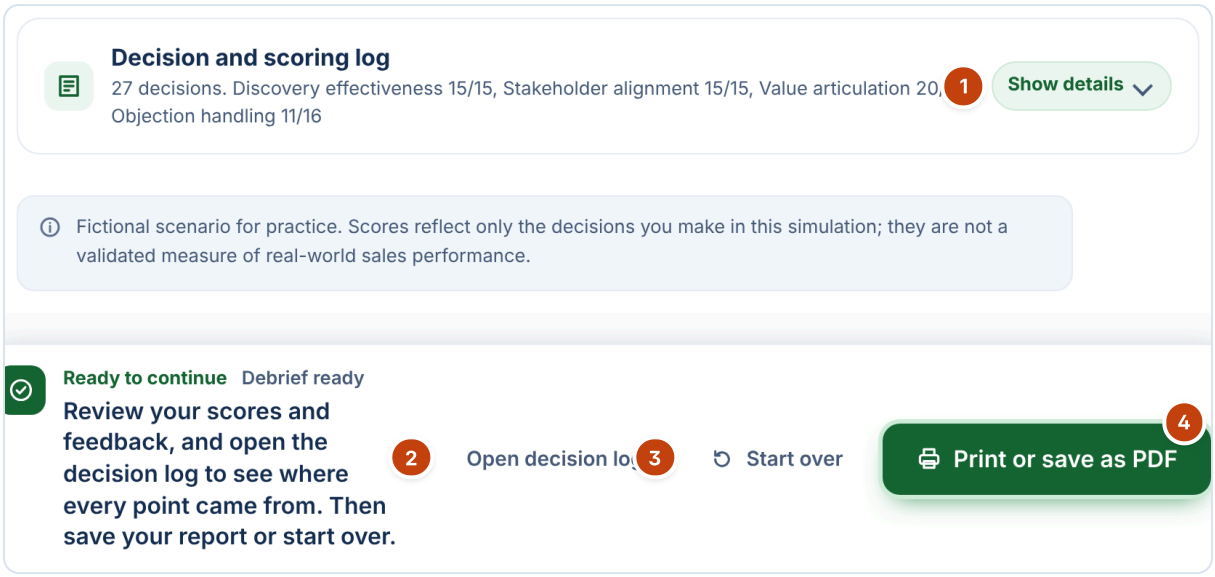

Figure 14. The collapsed decision and scoring log, with the debrief's Next step bar.

1. The **decision and scoring log**. Select **Show details** to expand it.
2. **Open decision log**, which opens the same log from the bar.
3. **Start over**.
4. **Print or save as PDF**, the debrief's primary action.

The log is collapsed by default and shows your totals. Expand it to see all 27 decisions, grouped by stage, each with what you chose and the points it earned. For the four objections, the log also shows the stakeholder who raised each one, your first response and its points, any revised response and its points, and the score retained. Select **Show your responses** in an objection row to read the exact words you chose.

Print or save as PDF

Select **Print or save as PDF** in the Next step bar to print the debrief or save it with your browser's *Save as PDF* option. When you print, the decision log and every response detail expand automatically, so the printout is complete. This button appears only when the simulation is opened as its own page, for example from a hosted address or by opening `index.html`. When the simulation is shown inside another page, such as an embedded preview that blocks printing, **Start over** becomes the primary action instead.

9. Scoring and progress

Four equally weighted competencies

Each competency is reported as a percentage of its maximum points. Your overall score is the average of the four percentages, so each competency counts equally, regardless of how many points it contains.

Competency	How points are earned	Max
Discovery effectiveness	Each of your five questions: 3 points if it uncovers a key insight, 1 for a closed question, and 0 for pitching, early pricing, or an early demo.	15
Stakeholder alignment	2 points for each correctly identified role. Messages earn 3 when tailored, 1 when true but aimed at the wrong audience or generic, and 0 when counterproductive.	15
Value articulation	2 points for each correct capability match, 1 for each correct classification, and 0 to 3 for each of the four value-proposition building blocks.	25
Objection handling	First response: 4, 2, or 0 points. Revised response: 3, 2, or 0 points. The higher attempt counts for each objection.	16

These rules match the Scoring rules window in the simulation. There is no randomness and no hidden data, so the same choices always produce the same score.

Proficiency levels

Level	Score	Applies to
Strong	85 and above	The overall score and each competency.
Proficient	65 to 84	The overall score and each competency.
Developing	Below 65	The overall score and each competency.

Separately, any competency at 80% or above is listed as a strength in the debrief.

Customer trust is not a fifth competency

Customer trust is a scenario indicator. It shows how Halvorsen's stakeholders are reacting to you, and it appears in the Deal room and on the debrief, but it is never added to any competency or to your overall score.

> **What scores mean.** Scores reflect only the decisions you make in this fictional simulation. They are not a validated measure of real-world sales performance and should not be used for hiring, promotion, or performance evaluation.

Progress

Stages unlock in order. You can return to any completed stage to review your choices and feedback, but answers lock once they are asked, submitted, or committed. To try different decisions, start over (section 11).

10. Accessibility and troubleshooting

Keyboard navigation and focus

Every part of the simulation can be completed with a keyboard.

Key	What it does
`Tab` and `Shift` + `Tab`	Move forward and backward between controls.
`Enter` or `Space`	Select a button, question, response, or option.
Arrow keys	Move between options in a group (such as roles or building blocks), between stakeholder profile cards, and between the Value Studio tabs.
`Home` and `End`	Jump to the first or last stakeholder card or studio tab.
`Esc`	Close the Scoring rules or Start over window.

The control in focus is marked with a blue outline and a soft halo. A **Skip to main content** link appears when you first press `Tab`. When you move to a new stage, focus moves to the stage heading. After key actions, focus moves to the next sensible place, such as the next unasked question, the score summary, or the Next step button. The Next step button takes keyboard users directly to the next choice they need to make.

Results are never shown by color alone: every result also has a text label, such as *Effective* or *Best answer*, and an icon. Customer answers, feedback, scores, and a short confirmation after each selection (for example, *Saved. Next step: Dana: choose an opening message.*) are designed to be announced to screen readers.

Zoom, screen size, and motion

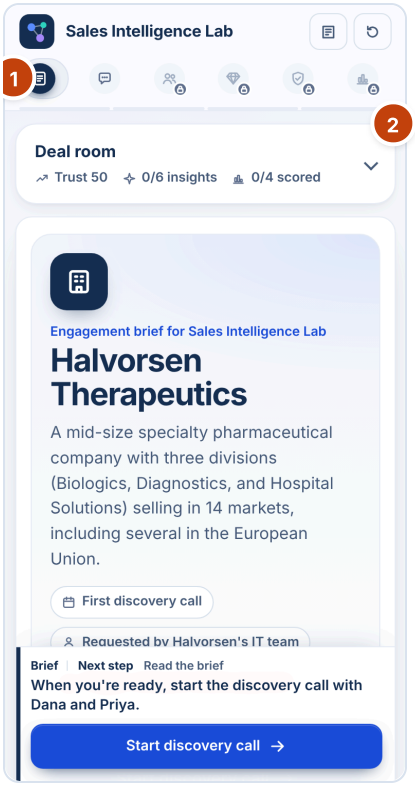

Figure 15. The Brief on a phone.

1. The **stage navigation**, shown as icons. The current stage is filled.
2. The **Deal room** summary bar. Select it to expand.
3. The **Next step bar** names the current stage.
4. The **primary button**, full width.

- The layout adapts from wide desktop screens down to phones 320 pixels wide without sideways scrolling. On narrower screens, panels stack vertically, the Deal room collapses into a summary bar, the decision log shows each row as a compact card, and the Next step bar names the current stage.
- On phones, the data landscape diagram's own labels become small, so a readable list of the four record IDs appears beneath it.
- If your device is set to reduce motion, the opening diagram animation and other transitions are turned off.

Common issues

If this happens	Try this
A stage in the navigation won't open.	It is locked. The notice that appears names the stage to finish first; select **Go to** to return to it.
I don't see a Continue or Submit button.	They appear in the Next step bar once a stage's required items are complete. Until then, the bar lists what's missing, and its button takes you to the next item.
I want to change an answer.	Stage 2 and Stage 3 answers can be changed until you submit. Discovery questions and objection responses are final when chosen. To change a submitted answer, start over.
An insight is missing from the evidence options.	Evidence options include only the insights you uncovered in discovery.
My progress disappeared.	Refreshing or closing the page starts over. Progress is not saved.
The Print or save as PDF button is missing.	Open the simulation as its own page rather than inside an embedded preview.
I can't see the Deal room.	On narrower screens, it is the summary bar above the workspace. Select it to expand.
I'm not sure what to do next.	Read the Next step bar at the bottom of the screen and select its primary button.

Known limitations

- **Progress is not saved.** Each visit starts fresh, and a refresh restarts the simulation.
- **Testing coverage.** Automated tests cover the best, worst, and mixed learner paths plus 30 randomized paths, scoring, keyboard operation, focus movement, text contrast, and layouts from 320 to 1,600 pixels wide, all in one browser engine (Chromium). The simulation has not been tested with screen readers (such as NVDA, JAWS, VoiceOver, or TalkBack), voice control, Windows high-contrast mode, browser zoom at 200% or 400%, Firefox, Safari, or physical phones and tablets. No independent accessibility audit has been done, and no conformance claim is made. The design target is WCAG 2.1 Level AA.
- **No formal usability study.** No external participants have taken part in testing.
- **Fonts vary by device.** The simulation uses your device's system fonts, so text may look slightly different on different computers.
- **One scenario, in English.** There is a single customer story. Decisions branch within it, but there are no alternate storylines.

11. Quick reference

The four-stage workflow

Stage	What you do	You're done when
1. Discovery	Ask five of ten questions. Read each answer and its coaching.	Five questions are asked. Select **Continue to stakeholders**.
2. Stakeholders	For each of three people, choose a role and an opening message.	All six answers are chosen. Select **Submit stakeholder plan**.
3. Value	Match five requirements, classify three statements, and compose a four-part value proposition.	All twelve items are complete. Select **Submit value proposition**.
4. Objections	Respond to four objections, revising once where offered if you choose.	All four are resolved. Select **See your debrief**.
Debrief	Review your scores, feedback, next steps, and decision log.	Select **Print or save as PDF**, or start over.

Follow the Next step bar. Whenever you're unsure what to do, look at the Next step bar at the bottom of the screen. It names the next step, and its primary button takes you there.

Practical tips

- Read the Brief carefully. Its facts come up again later.
- Before asking your first question, scan all ten and think about what you'll need later in the deal.
- Watch the Deal room. Customer trust tells you how your approach is landing.
- Read every coaching note, including on choices that worked. The explanations are where most of the learning happens.
- In Stage 2, read each person's priorities, concerns, and quote before choosing a message.
- In Stage 3, read the capability descriptions, not just their names.
- In Stage 4, use the coaching guide before you respond, and remember who raised each objection.
- After submitting Stage 3, compare your value proposition with the coaching example.

Restarting and trying a different path

1. Select **Start over** in the top bar, or in the debrief's Next step bar.
2. In the confirmation window, select **Start over** to clear every answer and score, or **Keep my progress** to cancel.
3. You return to the Brief, and every stage is reset.

Try a different pathway. Try a second run with a different set of discovery questions and notice how the insights, the Stage 2 note, and the evidence options in Stage 3 change. Comparing two runs' decision logs is a useful way to see how early choices shape later ones.
